

## QASA CLI GUIDE

### Port Module Command Line Manual

## Contents

1. Commands for Ethernet Port Configuration.....	6
bandwidth.....	6
clear counters interface .....	6
description.....	7
flow control .....	7
interface Ethernet.....	8
loopback .....	8
negotiation.....	9
port-rate-statistics interval .....	9
rate-violation .....	10
rate-violation control.....	10
show interface .....	11
shutdown .....	12
speed-duplex.....	12
storm-control.....	13
storm-control.....	14
storm-control bypass .....	15
virtual-cable-test .....	15
switchport discard packet.....	16
switchport flood-control.....	17
switchport flood-forwarding .....	18
2. Commands for Port Isolation Function .....	19
isolate-port group.....	19
isolate-port group switchport interface .....	19
show isolate-port group.....	20
3. Commands for Port Loopback Detection Function.....	21
loopback-detection control.....	21
loopback-detection control-recovery timeout .....	21
loopback-detection interval-time .....	22
loopback-detection specified-vlan .....	22
show loopback-detection .....	23
4. Commands for ULDP .....	24
uldp aggressive-mode.....	24
uldp enable .....	24

uldp hello-interval .....	25
uldp manual-shutdown.....	25
uldp recovery-time .....	26
uldp reset.....	26
show uldp.....	27
5. Commands for LLDP Function.....	28
clear lldp remote-table.....	28
lldp enable .....	28
lldp enable (port) .....	28
lldp management-address tlv .....	29
lldp mode.....	29
lldpmsgTxHold.....	30
lldp neighbors max-num.....	30
lldp notification interval.....	31
lldp too Many Neighbors.....	31
lldp transmit delay.....	32
lldp transmit optional tlv.....	32
lldp trap.....	33
lldptx-interval.....	33
show debugging lldp.....	34
show lldp .....	34
show lldp interface Ethernet .....	35
show lldp neighbors interface Ethernet.....	36
show lldp traffic .....	37
6. Commands for Port Channel .....	38
interface port-channel .....	38
lacp port-priority .....	38
lacp system-priority .....	39
lacp timeout .....	39
load-balance .....	40
port-group.....	41
port-group mode .....	41
show port-group .....	42
7. Commands for MTU .....	43
mtu .....	43

8. Commands for EFM OAM .....	44
clear ethernet-oam.....	44
ethernet-oam .....	44
ethernet-oam errored-frame threshold high .....	45
ethernet-oam errored-frame threshold low .....	45
ethernet-oam errored-frame window.....	46
ethernet-oam errored-frame-seconds threshold high.....	46
ethernet-oam errored-frame-seconds threshold Low .....	47
ethernet-oam errored-frame-seconds window .....	47
ethernet-oam errored-symbol-period threshold High .....	48
ethernet-oam errored-symbol-period threshold Low .....	49
ethernet-oam errored-symbol-period window .....	49
ethernet-oam link-monitor.....	50
ethernet-oam mode .....	50
ethernet-oam period .....	51
ethernet-oam remote-failure .....	51
ethernet-oam remote-loopback .....	52
ethernet-oam remote-loopback supported.....	52
ethernet-oam timeout .....	53
show ethernet-oam .....	53
show ethernet-oam events .....	54
show ethernet-oam link-events-configuration .....	55
show ethernet-oam loopback status .....	56
9. Commands for PORT SECURITY.....	57
clear port-security .....	57
show port-security .....	57
switchport port-security .....	58
switchport port-security mac-address .....	58
switchport port-security maximum .....	59
switchport port-security violation .....	59
10. Commands for DDM .....	61
clear transceiver threshold-violation .....	61
show transceiver.....	61
show transceiver threshold-violation .....	62
transceiver-monitoring .....	63

transceiver-monitoring interval .....	63
transceiver threshold .....	64
11. Commands for LLDP-MED.....	65
civic location .....	65
{description-language   province-state   city   county   street   locationNum   location   floor   room   postal   otherInfo} .....	65
ecs location .....	66
lldp med fast count .....	67
lldp med trap.....	67
lldp transmit med tlvall .....	67
lldp transmit med tlvcapability .....	68
lldp transmit med tlvextend Poe.....	68
lldp transmit med tlv location .....	69
lldp transmit med tlv inventory.....	70
lldp transmit med tlv networkPolicy .....	70
network policy.....	71
show lldp .....	72
show lldp [interface ethernet <IFNAME>] .....	73
show lldp neighbors .....	73
show lldp traffic .....	74
12. Commands for bpdu-tunnel .....	75
Bpdu-tunnel-protocol .....	75
bpdu-tunnel-protocol group-mac.....	76
bpdu-tunnel-protocol ethernetii .....	77
bpdu-tunnel-protocol snap .....	78
bpdu-tunnel-protocol llc.....	79
13. Commands for EEE Energy-saving .....	80
eeeenable .....	80
14. Commands for LED shut-off .....	81
port-led shutoff time-range.....	81

# 1. Commands for Ethernet Port Configuration

## bandwidth

<b>Command</b>	<b>bandwidth control &lt;bandwidth&gt; {transmit   receive   both}</b> <b>no bandwidth control</b>
<b>parameter</b>	<b>bandwidth</b> : is the bandwidth limit, which is shown in kbps, ranging between 1-1000000K.
<b>default</b>	Disable bandwidth restrictions by default.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	Use the bandwidth control <bandwidth> [both   receive   transmit] command to set the bandwidth rate.  Use the no bandwidth control restore default configuration.
<b>Example</b>	Set the bandwidth limit of 1/0/1-8 port to 40000K.  <b>Switch(Config)#interface ethernet 1/0/1-8</b> <b>Switch(Config-If-Port-Range)#bandwidth control 40000 both</b>

## clear counters interface

<b>Command</b>	<b>clear counters [interface {ethernet &lt;interface-list&gt; / vlan&lt;vlan-id&gt; / port-channel &lt;port-channel-number&gt; / &lt;interface-name&gt;}]</b>
<b>parameter</b>	<b>interface-list</b> : Stands for the Ethernet port number. <b>vlan-id</b> : Stands for the VLAN interface number; <b>port-channel-number</b> : For trunk interface number; <b>interface-name</b> : For interface name, such as port-channel 1.
<b>default</b>	Port statistics default not cleared.
<b>Mode</b>	Admin Mode.
<b>Usage Guide</b>	If no port is specified, statistics for all ports are cleared.
<b>Example</b>	Clearing the statistics for Ethernet port1/0/1.  <b>Switch#clear counters interface ethernet 1/0/1.</b>

## description

<b>Command</b>	<b>description &lt;string&gt;</b> <b>no description</b>
<b>parameter</b>	<b>String:</b> Is a character string, which should not be exceeded to 200 characters.
<b>default</b>	No port name by default.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	This command is for helping the user to manage switches, such as the user assign names according to the port application, e.g. financial as the name of 1/0/1-2 ports which is used by financial department, engineering as the name of 1/0/9 ports which belongs to the engineering department, while the name of 1/0/12 ports is assigned with Server, which is because they connected to the server. In this way the port distribution state will be brought to the table.
<b>Example</b>	Specify the description of 1/0/1-2 port as financial.  <b>Switch(config)#interface ethernet 1/0/1-2</b> <b>Switch(Config-If-Port-Range)#description financial</b>

## flow control

<b>Command</b>	<b>flow control</b> <b>no flow control</b>
<b>parameter</b>	-
<b>default</b>	Disable port traffic control by default.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	After the flow control function is enabled, the port will notify the sending device to slow down the sending speed to prevent packet loss when traffic received exceeds the capacity of port cache. Ports support IEEE802.3X flow control; the ports work in half-duplex mode, supporting back-pressure flow control. If flow control results in serious HOL, the switch will automatically start HOL control (discarding some packets in the COS queue that may result in HOL) to prevent drastic degradation of network performance.
<b>Example</b>	Enabling the flow control function in ports 1/0/1-8.

	<b>Switch(config)#interface ethernet 1/0/1-8</b> <b>Switch(Config-If-Port-Range)#flow control</b>
--	--

## interface Ethernet

<b>Command</b>	<b>interface ethernet &lt;interface-list&gt;</b>
<b>parameter</b>	<b>Interface-list:</b> Stands for port number.
<b>default</b>	-
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	This command can be used to enter port configuration mode and run exit command to exit Ethernet port mode to global mode.
<b>Example</b>	Entering the Ethernet Port Mode for ports 1/0/1, 1/0/4-5, 1/0/8.  <b>Switch(config)#interface ethernet 1/0/1;1/0/4-5;1/0/8</b> <b>Switch(Config-If-Port-Range)#</b>

## loopback

<b>Command</b>	<b>loopback</b> <b>no loopback</b>
<b>parameter</b>	-
<b>default</b>	By default, disable loop testing in the Ethernet port.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	Loopback test can be used to verify the Ethernet ports are working normally. After loopback has been enabled, the port will assume a connection established to itself, and all traffic sent from the port will be received at the very same port.
<b>Example</b>	Enabling loopback test in Ethernet ports 1/0/1-8.  <b>Switch(config)#interface ethernet 1/0/1-8</b> <b>Switch(Config-If-Port-Range)#loopback</b>

## negotiation

<b>Command</b>	<b>negotiation {on   off}</b>
<b>parameter</b>	-
<b>default</b>	Auto-negotiation is enabled by default.
<b>Mode</b>	Port configuration Mode.
<b>Usage Guide</b>	This command applies to 1000Base-FX interface only. The negotiation command is not available for 1000Base-TX or 100Base-TX interface. To change the negotiation mode, speed and duplex mode of 1000Base-TX port, use speed-duplex command instead.
<b>Example</b>	<p>Port 21 of Switch1 is connected to port 21 of Switch2, the following will disable the negotiation for both ports.</p> <pre>Switch1(config)#interface ethernet1/0/21 Switch1(Config-If-Ethernet1/0/21)#negotiation off Switch2(config)#interface ethernet1/0/21 Switch2(Config-If-Ethernet1/0/21)#negotiation off</pre>

## port-rate-statistics interval

<b>Command</b>	<b>port-rate-statistics interval &lt;interval-value&gt;</b>
<b>parameter</b>	<b>interval-value:</b> The interval of port-rate-statistics, unit is second, ranging from 5 to 600 with the configuration step of 5.
<b>default</b>	Only port-rate-statistics of 5 seconds and 5 minutes are displayed.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	This command can be used to set the port rate statistics interval time.
<b>Example</b>	<p>Count the interval of port-rate-statistics as 20 seconds.</p> <pre>Switch(config)#port-rate-statistics interval 20</pre>

## rate-violation

<b>Command</b>	<b>rate-violation [broadcast   multicast   unicast   all] &lt;200-2000000&gt;</b> <b>no rate-violation</b>
<b>parameter</b>	<b>broadcast:</b> broadcast packet <b>multicast:</b> multicast packet <b>unicast:</b> unicast packet <b>all:</b> all packets <b>&lt;200-2000000&gt;:</b> The number of packets allowed to pass per second.
<b>default</b>	There is no limit for the packet reception rate.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	This command is mainly used to detect the abnormal port flow. For example, when there are a large number of broadcast packets caused by a loopback, which affect the processing of other tasks, the port will be shut down or block to ensure the normal processing of the switch. This command needs to associate with rate-isolation control command.
<b>Example</b>	Set the rate-violation of port 1/0/8-10 (GB ports) as 10000pps, it will be shut down after rate-violation and the port recovery time as 1200 seconds, when the packet reception rate exceeds 10000, the port will be shut down, and then, after 1200 seconds, the port will be UP again.  <b>Switch(config)#interface ethernet 1/0/8-10</b> <b>Switch(Config-Port-Range)#rate-violation unicast 10000</b> <b>Switch(Config-Port-Range)#rate-violation control shutdown recovery 1200</b>

## rate-violation control

<b>Command</b>	<b>rate-violation control [shutdown recovery &lt;0-86400&gt;   block]</b> <b>no rate-violation control</b>
<b>parameter</b>	<b>shutdown:</b> A port is shut down after rate-violation <b>recovery:</b> After a period of time the port can recover Shutdown to UP again. <b>block:</b> A port is block after rate-violation, this parameter and MSTP, EAPS (MRPP), Loopback Detection, ULPP are mutually exclusive. If other modules set STP state, this function cannot be set to block mode. <b>&lt;0-86400&gt;:</b> Automatic recovery time.
<b>default</b>	There is no control operation for rate-violation.

<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	This command is mainly used to the control operation after rate-violation.
<b>Example</b>	<p>After set the rate-violation of the unicast packet of port 1/8-10 (GB ports) as 10000pps, the port will be block.</p> <pre><b>Switch(Config)#interface ethernet 1/0/8-10</b> <b>Switch(Config-Port-Range)#rate-violation unicast 10000</b> <b>Switch(Config-Port-Range)#rate-violation control block</b></pre>

## show interface

<b>Command</b>	<b>show interface [ethernet &lt;interface-number&gt;   port-channel &lt;port-channel-number&gt;   vlan &lt;vlan-id&gt;   &lt;interface-name&gt;] [detail]</b> <b>show interface ethernet status</b> <b>show interface ethernet counter {packet   rate}</b>
<b>parameter</b>	<b>interface-number:</b> is the port number of the Ethernet <b>port-channel-number:</b> is the number of the aggregation interface <b>vlan-id:</b> is the VLAN interface number, the value range from 1 to 4094 <b>interface-name:</b> is the name of the interface such as port-channel1 <b>detail:</b> show the detail of the port
<b>default</b>	Information not displayed by default.
<b>Mode</b>	Admin and Configuration Mode.
<b>Usage Guide</b>	Use this command to view interface-related configuration information.
<b>Example</b>	Show the information of VLAN 1. Vlan1 is up, line protocol is up, dev index is 11001 Device flag 0x1003(UP BROADCAST MULTICAST) Time since last status change:0w-0d-1h-14m-57s (4497 seconds) IPv4 address is: 192.168.2.1 255.255.255.0 (Primary) VRF Bind: Not Bind Hardware is Ether SVI, address is 00-1f-ce-10-b0-1a MTU is 1500 bytes , BW is 0 Kbit Encapsulation ARPA, loopback not set 5 minute input rate 244 bits/sec, 0 packets/sec 5 minute output rate 0 bits/sec, 0 packets/sec The last 5 second input rate 0 bits/sec, 0 packets/sec The last 5 second output rate 0 bits/sec, 0 packets/sec Input packets statistics: Input queue 0/600, 0 drops

	1012 packets input, 193127 bytes, 0 no buffer 0 input errors, 0 CRC, 0 oversize, 0 undersize 0 jabber, 0 fragments Output packets statistics: 448 packets output, 108316 bytes, 0 underruns 0 output errors, 0 collisions
--	--

## shutdown

Command	<b>Shutdown</b>
<b>parameter</b>	-
<b>default</b>	Ethernet port is open by default.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	When Ethernet port is shut down, no data frames are sent to the port, and the port status displayed when the user types the "show interface" command is "down".
<b>Example</b>	Opening ports 1/0/1-8.  <b>Switch(config)#interface ethernet1/0/1-8</b> <b>Switch(Config-If-Port-Range)#no shutdown</b>

## speed-duplex

<b>Command</b>	<b>speed-duplex {auto [10 [100 [1000]] [auto   full   half  ]]   force10-half   force10-full   force100-half   force100-full   force100-fx [module-type {auto-detected   no-phy-integrated   phy-integrated}]   {{force1g-half   force1g-full} [no negotiate [master   slave]]}}}</b> <b>no speed-duplex</b>
<b>parameter</b>	auto: is the auto speed and duplex negotiation 10: 10 kbps 100: 100 kbps 1000: 1000 kbps <b>force10-half:</b> is the forced 10Mbps at half-duplex mode <b>force10-full:</b> is the forced 10Mbps at full-duplex mode <b>force100-half:</b> is the forced 100Mbps at half-duplex mode <b>force100-full:</b> is the forced 100Mbps at full-duplex mode <b>force1g-half:</b> is the forced 1000Mbps at half-duplex mode

	<p><b>force1g-full:</b> is the forced 1000Mbps at full-duplex mode</p> <p><b>force100-fx:</b> is the forced 100Mbps at full-duplex mode</p> <p><b>auto-detected:</b> automatic detection</p> <p><b>no-phy-integrated:</b> there is no phy-integrated 100Base-FX module</p> <p><b>phy-integrated:</b> phy-integrated 100Base-FX module</p> <p><b>no negotiate:</b> disables auto-negotiation forcibly for 1000Mb port</p> <p><b>master:</b> forces the 1000Mb port to be master mode</p> <p><b>slave:</b> Forces the 1000Mb port to be slave mode</p>
<b>default</b>	Auto-negotiation for speed and duplex mode is set by default.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	<p>This command configures the port speed and duplex mode. When configuring port speed and duplex mode, the speed and duplex mode must be the same as the setting of the remote end, i.e., if the remote device is set to auto-negotiation, then auto-negotiation should be set at the local port. If the remote end is in forced mode, the same should be set in the local end.</p> <p>1000Gb ports are by default <b>master</b> when configuring <b>no negotiate</b> mode. If one end is set to <b>master</b> mode, the other end must be set to <b>slave</b> mode. <b>force1g-half</b> is not supported yet.</p>
<b>Example</b>	<p>Port 1 of Switch1 is connected to port 1 of Switch2, the following will set both ports in forced 100Mbps at half-duplex mode.</p> <pre>Switch1(config)#interface ethernet1/0/1 Switch1(Config-If-Ethernet1/0/1)#speed-duplex force100-half Switch2(config)#interface ethernet1/0/1 Switch2(Config-If-Ethernet1/0/1)#speed-duplex force100-half</pre>

## storm-control

<b>Command</b>	<b>storm-control { kbps   pps }</b> <b>no storm-control pps</b>
<b>parameter</b>	<b>kbps:</b> means the unit of limit is kbits/s <b>pps:</b> means the limit unit is packets/s.
<b>default</b>	The default is kbps.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	Configure the kbps or pps as the limit mode in global mode, then set broadcast, multicast or unknown unicast limit value in port mode.
<b>Example</b>	Setting ports 1-8 allow 1000kbit broadcast packets per second.

	<b>Switch(config)#storm-control kbps</b> <b>Switch(config-if-port-range)#storm-control broadcast 1000</b>
--	--

## storm-control

<b>Command</b>	<b>storm-control {unicast   broadcast   multicast} &lt;value&gt;</b> <b>no storm-control {unicast   broadcast   multicast}</b>
<b>parameter</b>	<b>unicast:</b> To limit unicast traffic for unknown destination. <b>broadcast:</b> To limit broadcast traffic. <b>multicast:</b> To limit multicast traffic. <b>Value:</b> Limit the flow rate per second, PPS range from 1 to 1488095; kbps range from 1 to 1000000.
<b>default</b>	No limit is set by default. So, broadcasts, multicasts and unknown destination unicasts are allowed to pass at line speed.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	All ports in the switch belongs to a same broadcast domain if no VLAN has been set. The switch will send the above mentioned three traffics to all ports in the broadcast domain, which may result in broadcast storm and so may greatly degrade the switch performance. Enabling Broadcast Storm Control can better protect the switch from broadcast storm. If the allowed traffic is set to 1000kbps, this means allow 1000 kbit per second and suppress the rest. The switch supports two kind of speed limit, it includes kbps which is limited by bandwidth and pps which is limited by the numbers of packets. It only can select one from the two ways and cannot set the two way in the same time (by global mode). Broadcast suppression is similar to bandwidth control. There is granularity limitation for the chip; the switch support 16Kbps granularities. If the <Kbits> that user input is not the integer times of 16, the system will adjust to the integer times of 16 automatically and print the true limit value to user.
<b>Example</b>	Setting ports 1-8 allow 1000kbit broadcast packets per second. <b>Switch(config-if-port-range)#storm-control broadcast 1000</b>

## storm-control bypass

<b>Command</b>	<b>storm-control bypass {arp   bpdu   igmp   rma   rtk }&lt;enable   disable &gt;</b>
<b>parameter</b>	<p><b>arp:</b> means the protocol packets of arp-request</p> <p><b>bpdu:</b> means bpdu protocol packets</p> <p><b>igmp:</b> means igmp protocol packets</p> <p><b>rma:</b> means multicast address is the saved multicast packets</p> <p><b>rtk:</b> means the special private packets that realtek used</p> <p><b>enable:</b> enable some protocol to limit filter function</p> <p><b>disable:</b> Disable some protocol to broadcast limit filter function.</p>
<b>default</b>	Disable.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	Configures broadcast limit filter function of some protocol in global mode, then configure broadcast limit in port mode. At this moment, the protocol packets flow from the port cannot be limited.
<b>Example</b>	<p>Configure arp protocol filter function to make the arp-request data packets that from 1 port in cannot be limited.</p> <pre>Switch (config)#storm-control bypass arp enable Switch(config-if-ethernet1/0/1)#storm-control broadcast 1000</pre>

## virtual-cable-test

<b>Command</b>	<b>virtual-cable-test interface ethernet &lt;interface-list&gt;</b>
<b>parameter</b>	<b>interface-list:</b> Port ID
<b>default</b>	-
<b>Mode</b>	Admin Mode.
<b>Usage Guide</b>	The RJ-45 port connected with the twisted pair under test should be in accordance with the wiring sequence rules of IEEE 802.3, or the wire pairs in the test result may not be the actual ones. On a 100M port, only two pairs are used: (1, 2) and (3, 6), whose results are the only effective ones. If a 1000M port is connected to a 100M port, the results of (4, 5) and (7, 8) will be of no meaning. The result may have deviations according to the type of the twisted pair, the temperature, working voltage and other conditions. When the temperature is 20 degree Celsius, and the voltage is stable without interference, and the length of the twisted pair is no longer than 100 meters, a deviation of +/-2 meters

	<p>is allowed. When the port is at Link UP status, a deviation of +/-10 meters is allowed. Notice: the test procedure will block all data flow on the line for 5-10 seconds, and then restore the original status.</p> <p>568A wiring sequence: (1 green white, 2 green), (3 orange white, 6 orange), (4 blue, 5 blue white), (7 brown white, 8 brown).</p> <p>568B wiring sequence: (1 orange white, 2 orange), (3 green white, 6 green), (4 blue, 5 blue white), (7 brown white, 8 brown).</p>															
<b>Example</b>	<p>Test the link status of the twisted pair connected to the 1000M port 1/0/1.</p> <p><b>Switch#virtual-cable-test interface ethernet 1/0/1</b></p> <p>Interface Ethernet1/0/1:</p> <table border="1"> <thead> <tr> <th>Cable pairs</th> <th>Cable status</th> <th>Length (meters)</th> </tr> </thead> <tbody> <tr> <td>(1, 2)</td> <td>well</td> <td>1</td> </tr> <tr> <td>(3, 6)</td> <td>well</td> <td>1</td> </tr> <tr> <td>(4, 5)</td> <td>well</td> <td>1</td> </tr> <tr> <td>(7, 8)</td> <td>well</td> <td>1</td> </tr> </tbody> </table>	Cable pairs	Cable status	Length (meters)	(1, 2)	well	1	(3, 6)	well	1	(4, 5)	well	1	(7, 8)	well	1
Cable pairs	Cable status	Length (meters)														
(1, 2)	well	1														
(3, 6)	well	1														
(4, 5)	well	1														
(7, 8)	well	1														

## switchport discard packet

<b>Command</b>	<b>switchport discard packet { tag   untag }</b> <b>no switchport discard packet { tag   untag }</b>
<b>parameter</b>	<b>tag:</b> Means it does not receive tag packet. <b>untag:</b> Means it does not receive untag packet
<b>default</b>	The default does not have the restriction.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	This command is not suggested to be configured only if there is the special requirement.
<b>Example</b>	<p>Configure the port of 1/0/8 not to receive tag packets.</p> <p><b>Switch(config)#interface ethernet 1/0/8</b>  <b>Switch(config-if-ethernet1/0/8)#switchport discard packet tag</b></p>

## switchport flood-control

<b>Command</b>	<b>switchport flood-control { bcast mcast ucast }</b> <b>no switchport flood-control { bcast mcast ucast }</b>
<b>parameter</b>	<p><b>bcast:</b> Prevents that broadcast packets cannot be transmitted to the specified port.</p> <p><b>mcast:</b> Prevents that unknown multicast packets cannot be transmitted to the specified port.</p> <p><b>Ucast:</b> Prevents that unknown unicast packets cannot be transmitted to the specified port.</p>
<b>default</b>	Switch transmits broadcast, unknown multicast and unknown unicast packets to other port in broadcast domain.
<b>Mode</b>	Port configuration mode.
<b>Usage Guide</b>	<p>This command takes effect for 100M and 1000M ports; it also takes effect for Access, Trunk and Hybrid ports. When this command is valid, the port will allow unicast or multicast flow to pass after port learned the corresponding unicast mac or multicast mac.</p> <p>This command only control that broadcast, multicast and unknown unicast packets sent by other ports cannot be transmitted to the specified port, but it cannot control these packets from the specified port. For example, set switchport flood-control bcast command in port 1/0/1, broadcast packets cannot be transmitted from other ports to port 1/0/1, but port 1/0/1 can receive and transmit broadcast packets.</p>
<b>Example</b>	<p>Configure flood-control of bcast and mcast for port 1/0/1 or port 1/0/8-10 respectively.</p> <pre>Switch(config)#interface ethernet 1/0/1 Switch(config-if-ethernet1/0/1)#switchport flood-control bcast Switch(config)#interface ethernet 1/0/8-10 Switch(config-if-port-range)#switchport flood-control mcast</pre>

## switchport flood-forwarding

<b>Command</b>	<b>switchport flood-forwarding mcast no switchport flood-forwarding mcast</b>
<b>parameter</b>	<b>mcast:</b> Prevents that unknown multicast packets can be transmitted to the specified port.
<b>default</b>	Switch transmits unknown multicast packets to other port in broadcast domain.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	This command takes effect for 100M and 1000M ports; it also takes effect for Access, Trunk and Hybrid ports. The command is usually combined with ip igmp snooping, ip igmp snooping does not support unknown multicast and broadcast, it can transfer unknown multicast flow after configure switchport flood-forwarding mcast.
<b>Example</b>	<p>Set switch 1/0/1 port broadcast flood-forwarding.</p> <pre><b>switch#</b> <b>switch#config</b> <b>switch(config)#interface ethernet 1/0/1</b> <b>switch(config-if-ethernet1/0/1)# switchport flood-forwarding</b> <b>mcast</b> <b>switch(config-if-ethernet1/0/1)#exit</b> <b>switch(config)#</b></pre>

## 2. Commands for Port Isolation Function

### isolate-port group

<b>Command</b>	<b>isolate-port group &lt;WORD&gt;</b> <b>no isolate-port group &lt;WORD&gt;</b>
<b>parameter</b>	<b>WORD:</b> Is the name identification of the group, no longer than 32 Characters.
<b>default</b>	-
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	Users can create different port isolation groups based on their requirements. For example, if a user wants to isolate all downlink ports in a vlan of a switch, he can implement that by creating a port isolation group and adding all downlink ports of the vlan into it. No more than 16 port isolation groups can a switch have. When the users need to change or redo the configuration of the port isolation group, he can delete the existing group with the no operation of this command.
<b>Example</b>	Create a port isolation group and name it as "test".  <b>Switch&gt;enable</b> <b>Switch#config</b> <b>Switch(config)#isolate-port group test</b>

### isolate-port group switchport interface

<b>Command</b>	<b>isolate-port group &lt;WORD&gt; switchport interface [ethernet] &lt;IFNAME&gt;</b> <b>no isolate-port group &lt;WORD&gt; switchport interface [ethernet] &lt;IFNAME&gt;</b>
<b>parameter</b>	<b>WORD:</b> is the name identification of the group, no longer than 32 Characters. <b>IFNAME:</b> is the name of the interface
<b>default</b>	-
<b>Mode</b>	Global Mode or Vlan Configuration Mode.
<b>Usage Guide</b>	Users can add Ethernet ports into a port isolation group according to their requirements, the isolation group can isolate it from each other (Global mode) in all vlan, it also can isolate it from each other (vlan mode) in some vlan or remove them from a port isolation group according to their requirements. When an Ethernet port is a member of

	more than one port isolate group, it will be isolated from every port of all groups it belongs to.
<b>Example</b>	<p>Add Ethernet ports 1/0/1-2 and 1/0/5 into a port isolation group named as "test", add Ethernet ports 1/0/3-4 into a port isolation group named as "1" in vlan10.</p> <pre><b>Switch(config)#isolate-port group test switchport interface ethernet 1/0/1-2; 1/0/5</b> <b>Switch(config-vlan10)#isolate-port group 1 switchport interface ethernet 1/0/3-4</b></pre>

### **show isolate-port group**

<b>Command</b>	<b>show isolate-port group [&lt;WORD&gt;]</b>
<b>parameter</b>	<i>WORD</i> : the name identification of the group, no longer than 32 characters
<b>default</b>	Display the configuration of all port isolation groups.
<b>Mode</b>	Admin Mode and Global Mode.
<b>Usage Guide</b>	Users can view the configuration of port isolation with this command.
<b>Example</b>	<p>Display the port isolation configuration of the port isolation group named as "test".</p> <pre><b>Switch(config)#show isolate-port group test</b> <b>The isolate-port Ethernet1/0/5</b> <b>The isolate-port Ethernet1/0/2</b></pre>

### 3. Commands for Port Loopback Detection Function

#### **loopback-detection control**

<b>Command</b>	<b>loopback-detection control {shutdown  block }</b> <b>no loopback-detection control</b>
<b>parameter</b>	<b>Shutdown:</b> Set the control method as shutdown, which means to close down the port if a port loopback is found. <b>Block:</b> Set the control method as block, which means to block a port by allowing bpdu and loopback detection messages only if a port loopback is found.
<b>default</b>	Disable the function of loopback detection control.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	Enables loopback detection control on the port, which is disabled by the NO operation of this command.
<b>Example</b>	Enable the function of loopback detection control under port1/2 mode.  <b>Switch(config)#interface ethernet 1/0/2</b> <b>Switch(Config-If-Ethernet1/0/2)#loopback-detection control shutdown</b> <b>Switch(Config-If-Ethernet1/0/2)#no loopback-detection control</b>

#### **loopback-detection control-recovery timeout**

<b>Command</b>	<b>loopback-detection control-recovery timeout &lt;0-3600&gt;</b>
<b>parameter</b>	<b>0-3600:</b> Second is recovery time for controlled state, 0 is not recovery state.
<b>default</b>	The recovery is not automatic by default.
<b>Mode</b>	Global Configuration Mode.
<b>Usage Guide</b>	When a port detects a loopback and works in control mode, the ports always work in control mode and not recover. The port will not send packet for detection in shutdown mode, however, the port will send loopback-detection packet to detect whether have loopback in block or learning mode. If the recovery time is configured, the ports will recover normal state when the overtime is time-out. The recovery time is a useful time for shutdown control mode, because the port can keep on to detect loopback in the other modes, so suggestion not to use in this command.

<b>Example</b>  <b>Switch(config)#loopback-detection control-recovery timeout 30.</b>	Enable automatic recovery of the loopback-detection control mode after 30s.
---	---

### loopback-detection interval-time

<b>Command</b>  <b>loopback-detection interval-time &lt;loopback&gt;&lt;no-loopback&gt;</b> <b>no loopback-detection interval-time</b>	
<b>parameter</b>  loopback: The detection interval if any loopback is found, ranging from 5 to 300, in seconds. no-loopback: The detection interval if no loopback is found, ranging from 1 to 30, in seconds.	
<b>default</b>  The default value is 5s with loopbacks existing and 3s otherwise.	
<b>Mode</b>  Global Mode.	
<b>Usage Guide</b>  When there is no loopback detection, the detection interval can be relatively shorter, for too short a time would be a disaster for the whole network if there is any loopback. So, a relatively longer interval is recommended when loopbacks exist.	
<b>Example</b>  Set the loopback detection interval as 35, 15.  <b>Switch(config)#loopback-detection interval-time 35, 15.</b>	

### loopback-detection specified-vlan

<b>Command</b>  <b>loopback-detection specified-vlan &lt;vlan-list&gt;</b> <b>no loopback-detection specified-vlan [&lt;vlan-list&gt;]</b>	
<b>parameter</b>  <i>vlan-list</i> : VLAN ID	
<b>default</b>  Disable the function of detecting the loopbacks through the port.	
<b>Mode</b>  Port Mode.	
<b>Usage Guide</b>  If a port can be a TRUNK port of multiple Vlans, the detection of loopbacks can be implemented on the basis of port+Vlan, which means the objects of the detection can be specified Vlans on a port. If the port is an ACCESS port, only one Vlan on the port is allowed to be checked despite the fact that multiple Vlans can be configured. This function is not supported under Port-channel.	

<b>Example</b>	Enable the function of loopback detection under port 1/2 mode.
	<pre><b>Switch(config)#interface ethernet 1/0/2</b> <b>Switch(Config-If-Ethernet1/0/2)#switchport mode trunk</b> <b>Switch(Config-If-Ethernet1/0/2)#switchport trunk allowed</b> <b>vlan all</b> <b>Switch(Config-If-Ethernet1/0/2)#loopback-detection</b> <b>specified-vlan 1;3;5-20</b> <b>Switch(Config-If-Ethernet1/0/2)#no loopback-detection</b> <b>specified-vlan 1;3;5-20</b></pre>

### **show loopback-detection**

<b>Command</b>	<b>show loopback-detection [interface &lt;interface-list&gt;]</b>
<b>parameter</b>	interface-list: The list of ports to be displayed, for example: Ethernet 1/0/1.
<b>default</b>	-
<b>Mode</b>	Admin and Configuration Mode.
<b>Usage Guide</b>	Displays the state and result of loopback detection on ports with this command.
<b>Example</b>	<p>Display the state of loopback detection on port 4.</p> <pre><b>Switch(config)#show loopback-detection interface Ethernet</b> <b>1/0/4.</b></pre> <p><b>loopback detection config and state information in the switch!</b></p> <p><b>PortName Loopback Detection Control Mode Is Controlled</b></p> <p><b>Ethernet1/4 Enable Shutdown No</b></p>

## 4. Commands for ULDP

### **uldp aggressive-mode**

<b>Command</b>	<b>Uldp aggressive-mode</b> <b>no uldp aggressive-mode</b>
<b>parameter</b>	-
<b>default</b>	Global Configuration Mode and Port Configuration Mode.
<b>Mode</b>	Normal mode.
<b>Usage Guide</b>	The ULDP working mode can be configured only if it is enabled globally. When ULDP aggressive mode is enabled globally, all the existing fiber ports will work in aggressive mode. For the copper ports and fiber ports which are available after the configuration is available, aggressive mode should be enabled in port configuration mode.
<b>Example</b>	To enable ULDP aggressive mode globally. Switch(config)#uldp aggressive-mode

### **uldp enable**

<b>Command</b>	<b>uldp {enable disable}</b>
<b>parameter</b>	-
<b>default</b>	By default ULDP is not configured.
<b>Mode</b>	Global Configuration Mode and Port Configuration Mode.
<b>Usage Guide</b>	ULDP can be configured for the ports only if ULDP is enabled globally. If ULDP is enabled globally, it will be effected for all the existing fiber ports. For copper ports and fiber ports which are available after ULDP is enabled, this command should be issued in the port configuration mode to make ULDP to be effected.
<b>Example</b>	Enable ULDP in global configuration mode. Switch(config)#uldp enable

## uldp hello-interval

<b>Command</b>	<b>uldp hello-interval &lt;integer&gt;</b> <b>no uldp hello-interval</b>
<b>parameter</b>	<b>integer:</b> The interval for the Hello messages, with its value limited between 5 and 100 seconds, 10 seconds by default.
<b>default</b>	10 seconds by default.
<b>Mode</b>	Global Configuration Mode.
<b>Usage Guide</b>	Interval for hello messages can be configured only if ULDP is enabled globally, its value is limited between 5 to 100 seconds.
<b>Example</b>	To configure the interval of Hello messages for 12 seconds. <b>Switch(config)#uldp hello-interval 12</b>

## uldp manual-shutdown

<b>Command</b>	<b>uldp manual-shutdown</b> <b>no uldp manual-shutdown</b>
<b>parameter</b>	-
<b>default</b>	Auto mode.
<b>Mode</b>	Global Configuration Mode.
<b>Usage Guide</b>	This command can be issued only if ULDP has been enabled globally.
<b>Example</b>	To enable manual shutdown globally. <b>Switch(config)#uldp manual-shutdown</b>

## uldp recovery-time

<b>Command</b>	<b>uldp recovery-time &lt;integer&gt;</b> <b>no uldp recovery-time</b>
<b>parameter</b>	<b>Integer:</b> The time out value for the ULDP recovery timer. Its value is limited between 30 and 86400 seconds.
<b>default</b>	0 is set by default which means the recovery is disabled.
<b>Mode</b>	Global Configuration Mode.
<b>Usage Guide</b>	If an interface is shut down by ULDP, and the recovery timer times out, the interface will be reset automatically. If the recovery timer is set to 0, the interface will not reset.
<b>Example</b>	To set the recovery timer to be 600 seconds.  <b>Switch(config)#uldp recovery-time 600.</b>

## uldp reset

<b>Command</b>	<b>Uldp reset</b>
<b>parameter</b>	-
<b>default</b>	-
<b>Mode</b>	Globally Configuration Mode and Port Configuration Mode.
<b>Usage Guide</b>	This command can only be effected only if the specified interface is disabled by ULDP.
<b>Example</b>	To reset all the port which are disabled by ULDP.  <b>Switch(config)#uldp reset</b>

## show uldp

<b>Command</b>	<b>show uldp [interface ethernet&lt;interface-name&gt;]</b>																														
<b>parameter</b>	<b>interface-name:</b> Is the interface name.																														
<b>default</b>	-																														
<b>Mode</b>	Admin and Configuration Mode.																														
<b>Usage Guide</b>	If no parameters are appended, the global ULDP information will be displayed. If the interface name is specified, information about the interface and its neighbors will be displayed along with the global information.																														
<b>Example</b>	<p>To display the global ULDP information.</p> <pre><b>Switch(config)#show uldp</b></pre> <pre> Uldp enable uldp hello interval is          10 uldp shut down mode is         AUTO uldp global work mode is       NORMAL the total number of the port is 4 -----</pre> <table border="1"> <thead> <tr> <th>Port Name</th> <th>PhyLink</th> <th>Line Protocol</th> <th>WorkMode</th> <th>PortState</th> <th>NeighborNum</th> </tr> </thead> <tbody> <tr> <td>Ethernet1/0/25</td> <td>UP</td> <td>DOWN</td> <td>NORMAL</td> <td>INACTIVE</td> <td>0</td> </tr> <tr> <td>Ethernet1/0/26</td> <td>UP</td> <td>DOWN</td> <td>NORMAL</td> <td>INACTIVE</td> <td>0</td> </tr> <tr> <td>Ethernet1/0/27</td> <td>UP</td> <td>DOWN</td> <td>NORMAL</td> <td>INACTIVE</td> <td>0</td> </tr> <tr> <td>Ethernet1/0/28</td> <td>UP</td> <td>DOWN</td> <td>NORMAL</td> <td>INACTIVE</td> <td>0</td> </tr> </tbody> </table>	Port Name	PhyLink	Line Protocol	WorkMode	PortState	NeighborNum	Ethernet1/0/25	UP	DOWN	NORMAL	INACTIVE	0	Ethernet1/0/26	UP	DOWN	NORMAL	INACTIVE	0	Ethernet1/0/27	UP	DOWN	NORMAL	INACTIVE	0	Ethernet1/0/28	UP	DOWN	NORMAL	INACTIVE	0
Port Name	PhyLink	Line Protocol	WorkMode	PortState	NeighborNum																										
Ethernet1/0/25	UP	DOWN	NORMAL	INACTIVE	0																										
Ethernet1/0/26	UP	DOWN	NORMAL	INACTIVE	0																										
Ethernet1/0/27	UP	DOWN	NORMAL	INACTIVE	0																										
Ethernet1/0/28	UP	DOWN	NORMAL	INACTIVE	0																										

## 5. Commands for LLDP Function

### clear lldp remote-table

<b>Command</b>	<b>clear lldp remote-table</b>
<b>parameter</b>	-
<b>default</b>	Do not clear the entries.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	Clears the Remote table entries on this port.
<b>Example</b>	Clear the Remote table entries on this port. <b>Switch(Config-If-Ethernet 1/0/1)# clear lldp remote-table</b>

### lldp enable

<b>Command</b>	<b>lldp {enable disable}</b>
<b>parameter</b>	-
<b>default</b>	Disable LLDP function.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	If LLDP function is globally enabled, it will be enabled on every port.
<b>Example</b>	Enable LLDP function on the switch. <b>Switch(config)#lldp enable</b>

### lldp enable (port)

<b>Command</b>	<b>lldp {enable disable}</b>
<b>parameter</b>	-
<b>default</b>	Default Open.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	When LLDP is globally enabled, it will be enabled on every port, the switch on a port is used to disable this function when it is unnecessary on the port.

<b>Example</b>	Disable LLDP function of port on the port ethernet 1/0/5 of the switch.  <b>Switch(config)#in ethernet 1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)#lldp disable</b>
----------------	---

## lldp management-address tlv

<b>Command</b>	<b>lldp management-address tlv ip [A.B.C.D]</b> <b>no lldp management-address tlv ip</b>
<b>parameter</b>	<b>A.B.C.D:</b> It is the optional parameter, and it is the management address that user appoints for the port, it must be the unicast IPv4 address.
<b>default</b>	Disable.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	User can choose the feat management IPv4 address according to the configuration. If user appointed the management address when enable the function, this address will be used to send the management address TLV; if user does not appoint the management address, choose the IPv4 address from the VLAN layer3 as the management address to send the management address TLV. When the address is not appointed, if there is no feat address, the management address TLV information will not be sent.
<b>Example</b>	Enable the management address TLV function of ethernet 1/0/1 and appoint the address.  <b>Switch1(Config-If-Ethernet1/0/1)#lldp management-address tlv ip 192.168.24.32</b>

## lldp mode

<b>Command</b>	<b>lldp mode &lt;send   receive   both   disable&gt;</b>
<b>parameter</b>	<b>send:</b> Configure the LLDP function as only being able to send messages. <b>receive:</b> Configure the LLDP function as only being able to receive messages. <b>both:</b> Configure the LLDP function as being able to both send and receive messages. <b>disable:</b> Configure the LLDP function as not being able to send or receive messages.
<b>default</b>	The operating state of the port is "both".

<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	Chooses the operating state of the lldp Agent on the port.
<b>Example</b>	Configure the state of port ethernet 1/0/5 of the switch as "receive". <b>Switch(config)#in ethernet 1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)#lldp mode receive</b>

## lldpmsgTxHold

<b>Command</b>	<b>lldpmsgTxHold&lt;value&gt;</b> <b>no lldpmsgTxHold</b>
<b>parameter</b>	<b>Value:</b> Is the aging time multiplier, ranging from 2 to 10.
<b>default</b>	The value of the multiplier is 4 by default.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	After configuring the multiplier, the aging time is defined as the product of the multiplier and the interval of sending messages, and its maximum value is 65535 seconds.
<b>Example</b>	Set the value of the aging time multiplier as 6. <b>Switch(config)#lldp msgTxHold 6</b>

## lldp neighbors max-num

<b>Command</b>	<b>lldp neighbors max-num &lt;value&gt;</b> <b>no lldp neighbors max-num</b>
<b>parameter</b>	<b>Value:</b> Is the configured number of entries, ranging from 5 to 500.
<b>default</b>	The maximum number of entries can be stored in Remote MIB is 100.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	The maximum number of entries can be stored in Remote MIB.
<b>Example</b>	Set the Remote as 200 on port ethernet 1/0/5 of the switch. <b>Switch(config)#in ethernet 1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)# lldp neighbors max-num 200.</b>

## Ildp notification interval

<b>Command</b>	<b>Ildp notification interval &lt;seconds&gt;</b> <b>no Ildp notification interval</b>
<b>parameter</b>	<b>seconds:</b> Is the time interval, ranging from 5 to 3600 seconds.
<b>default</b>	The time interval is 5 seconds.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	After configuring the notification time interval, a "trap" message will be sent at the end of this time interval whenever the Remote Table changes.
<b>Example</b>	Set the time interval of sending Trap messages as 20 seconds. <b>Switch(config)#Ildp notification interval 20</b>

## Ildp too Many Neighbors

<b>Command</b>	<b>Ildp too Many Neighbors {discard   delete}</b>
<b>parameter</b>	<b>discard:</b> Discard the current message. <b>delete:</b> Delete the message with the least TTL in the Remote Table.
<b>default</b>	Discard.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	When the Remote MIB is full, Discard means to discard the received message; Delete means to delete the message with the least TTL in the Remote Table.
<b>Example</b>	Set port ethernet 1/0/5 of the switch as delete.  <b>Switch(config)#in ethernet 1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)#Ildp too Many Neighbors</b> <b>delete</b>

## lldp transmit delay

<b>Command</b>	<b>lldp transmit delay &lt;seconds&gt;</b> <b>no lldp transmit delay</b>
<b>parameter</b>	<b>seconds:</b> Is the time interval, ranging from 1 to 8192 seconds.
<b>default</b>	The interval is 2 seconds by default.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	When the messages are being sent continuously, a sending delay is set to prevent the remote information from being updated repeatedly due to sending messages simultaneously.
<b>Example</b>	Set the delay of sending messages as 3 seconds. <b>Switch(config)#lldp transmit delay 3</b>

## lldp transmit optional tlv

<b>Command</b>	<b>lldp transmit optional tlv [portDesc] [sysName] [sysDesc]</b> <b>[sysCap]</b> <b>no lldp transmit optional tlv</b>
<b>parameter</b>	<b>portDesc:</b> the description of the port <b>sysName:</b> the system name <b>sysDesc:</b> The description of the system <b>sysCap:</b> the capability of the system
<b>default</b>	The messages carry no optional TLV by default.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	When configuring the optional TLV, each TLV can only appear once in a message, port Desc optional TLV represents the name of local port; sysName optional TLV represents the name of local system; sysDesc optional TLV represents the description of local system; sysCap optional TLV represents the capability of local system.
<b>Example</b>	Configure that port ethernet 1/0/5 of the switch carries portDesc and sysCap TLV. <b>Switch(config)#in ethernet 1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)# lldp transmit optional tlv</b>

## lldp trap

<b>Command</b>	<b>lldp trap &lt;enable   disable&gt;</b>
<b>parameter</b>	-
<b>default</b>	The Trap function is disabled on the specified port by default.
<b>Mode</b>	Port Configuration Mode.
<b>Usage Guide</b>	The function of sending Trap messages is enabled on the port.
<b>Example</b>	<p>Enable the Trap function on port ethernet1/0/5 of the switch.</p> <pre><b>Switch(config)#in ethernet1/0/5</b> <b>Switch(Config-If-Ethernet1/0/5)#lldp trap enable</b></pre>

## lldptx-interval

<b>Command</b>	<b>lldptx-interval &lt;integer&gt;</b> <b>no lldptx-interval</b>
<b>parameter</b>	<b>Integer:</b> is the interval of sending, updating messages, ranging from 5 to 32768 seconds.
<b>default</b>	30s
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	<p>After configuring the interval of sending messages, LLDP messages can only be received after a period as long as configured. The interval should be less than or equal with half of aging time, for a too long interval will cause the state of being aged and reconstruction happen too often; while a too short interval will increase the flow of the network and decrease the bandwidth of the port. The value of the aging time of messages is the product of the multiplier and the interval of sending messages. The maximum aging time is 65535 seconds.</p> <p>When tx-interval is the default value and transmit delay is configured via some commands,</p> <p>tx-interval will become four times of the latter, instead of the default 40.</p>
<b>Example</b>	<p>Set the interval of sending messages as 40 seconds.</p> <pre><b>Switch(config)#lldp tx-interval 40</b></pre>

## show debugging lldp

<b>Command</b>	<b>show debugging lldp</b>
<b>parameter</b>	-
<b>default</b>	-
<b>Mode</b>	Admin and Configuration Mode.
<b>Usage Guide</b>	With show debugging lldp, all ports with lldp debug enabled will be displayed.
<b>Example</b>	<p>Display all ports with lldp debug enabled.</p> <p><b>Switch(config)#show debugging lldp</b></p> <pre>====BEGINNING OF LLDP DEBUG SETTINGS=====  debug lldp packets interface Ethernet1/0/1 =====END OF DEBUG SETTINGS=====</pre>

## show lldp

<b>Command</b>	<b>show lldp</b>
<b>parameter</b>	-
<b>default</b>	Do not display the configuration information of global LLDP.
<b>Mode</b>	Admin Mode, Global Mode.
<b>Usage Guide</b>	Users can check all the configuration information of global LLDP by using "show lldp".
<b>Example</b>	<p>Check the configuration information of global LLDP after it is enabled on the switch.</p> <p><b>Switch(config)#show lldp</b></p> <pre>-----LLDP GLOBAL INFORMATIONS----- LLDP has been enabled globally. LLDP enabled port : Ethernet1/0/1 Ethernet1/0/7 LLDP interval :30 LLDP txTTL :120 LLDP NotificationInterval :5 LLDP txDelay :2 LLDP-MED FastStart Repeat Count :4 -----END-----</pre>

## show lldp interface Ethernet

<b>Command</b>	<b>show lldp interface ethernet &lt;IFNAME&gt;</b>
<b>parameter</b>	IFNAME: Interface name
<b>default</b>	Do not display the configuration information of LLDP on the port.
<b>Mode</b>	Admin Mode, Global Mode.
<b>Usage Guide</b>	Users can check the configuration information of LLDP on the port by using "show lldp interface ethernet XXX".
<b>Example</b>	<p>Check the configuration information of LLDP on the port after LLDP is enabled on the switch.</p> <p><b>Switch (config-if-ethernet1/0/1)#show lldp interface ethernet 1/0/1</b></p> <p>Port name :Ethernet1/0/1      LLDP Agent Admin status : Both      LLDP Operation TLV : default</p> <p>LLDP Management Address TLV status :un enable</p> <p>LLDP Trap Status : disable      LLDP max Remote :100      LLDP Overflow handle : discard      LLDP interface remote status : Free</p> <p>lldp dot3 TLV:</p> <p>MED Optional TLV : default      MED Trap Status:Disable      MED TLV Transmit Status:Disable      MED Fast Transmit Status:Disable</p> <hr/>

## show lldp neighbors interface Ethernet

<b>Command</b>	<b>show lldp neighbors interface ethernet &lt; IFNAME &gt;</b>
<b>parameter</b>	IFNAME: Interface name
<b>default</b>	Do not display the LLDP neighbor information of the port.
<b>Mode</b>	Admin Mode, Global Mode.
<b>Usage Guide</b>	Users can check the configuration information of LLDP on the port by using "show lldp neighbors interface ethernet XXX".
<b>Example</b>	<p>Check the LLDP neighbor information of the port after LLDP is enabled on the port.</p> <p><b>Switch (config-if-ethernet1/0/1)#show lldp interface ethernet 1/0/1</b></p> <pre>Port name : Ethernet1/0/1 Port Remote Counter :1 Time Mark :92 Chassis Id Subtype :4 Chassis Id :00-e0-4c-00-00-00 Port Id Subtype :Local Port Id :gi1  Lldp Port Pvid TLV : Lldp port Pvid :1  *****</pre>

## show lldp traffic

<b>Command</b>	<b>show lldp traffic</b>																												
<b>parameter</b>	-																												
<b>default</b>	Do not display the statistics of LLDP data packets.																												
<b>Mode</b>	Admin Mode, Global Mode.																												
<b>Usage Guide</b>	Users can check the statistics of LLDP data packets by using "show lldp traffic".																												
<b>Example</b>	<p>Check the statistics of LLDP data packets after LLDP is enabled on the switch.</p> <p><b>Switch(config)#show lldp traffic</b></p> <table> <thead> <tr> <th>PortName</th> <th>Ageouts</th> <th>Discarded</th> <th>InErrors</th> <th>InFrames</th> <th>TLVs</th> <th>TLVs</th> </tr> <tr> <th></th> <th>Frames</th> <th>Frames</th> <th>Frames</th> <th>Out</th> <th>Discarded</th> <th>Unrecognized</th> </tr> </thead> <tbody> <tr> <td>Ethernet1/0/1</td> <td>0</td> <td>0</td> <td>0</td> <td>43</td> <td>42</td> <td>0</td> </tr> <tr> <td>Ethernet1/0/7</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>42</td> <td>0</td> </tr> </tbody> </table>	PortName	Ageouts	Discarded	InErrors	InFrames	TLVs	TLVs		Frames	Frames	Frames	Out	Discarded	Unrecognized	Ethernet1/0/1	0	0	0	43	42	0	Ethernet1/0/7	0	0	0	0	42	0
PortName	Ageouts	Discarded	InErrors	InFrames	TLVs	TLVs																							
	Frames	Frames	Frames	Out	Discarded	Unrecognized																							
Ethernet1/0/1	0	0	0	43	42	0																							
Ethernet1/0/7	0	0	0	0	42	0																							

## 6. Commands for Port Channel

### interface port-channel

<b>Command</b>	<b>interface port-channel &lt;port-channel-number&gt;</b>
<b>parameter</b>	port-channel-number: Port Channel Number
<b>default</b>	-
<b>Mode</b>	Global Mode
<b>Usage Guide</b>	Enables port channel configuration mode
<b>Example</b>	<p>Entering configuration mode for port-channel 1.</p> <pre>Switch(config)#interface port-channel 1 Switch(Config-If-Port-Channel1)#</pre>

### lacp port-priority

<b>Command</b>	<b>lacp port-priority &lt;port-priority&gt;</b> <b>no lacp port-priority</b>
<b>parameter</b>	<b>port-priority:</b> the port priority of LACP protocol, the range from 0 to 65535.
<b>default</b>	The default priority is 32768 by system.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	Use this command to modify the port priority of LACP protocol. The no command restores the default value.
<b>Example</b>	<p>Set the port priority of LACP protocol.</p> <pre>Switch(Config-If-Ethernet1/0/1)# lacp port-priority 30000</pre>

## lacp system-priority

<b>Command</b>	<b>lacp system-priority &lt;system-priority&gt;</b> <b>no lacp system-priority</b>
<b>parameter</b>	<b>system-priority:</b> The system priority of LACP protocol, ranging from 0 to 65535.
<b>default</b>	The default priority is 32768.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	Use this command to modify the system priority of LACP protocol. The no command restores the default value.
<b>Example</b>	Set the system priority of LACP protocol.  <b>Switch(config)#lacp system-priority 30000</b>

## lacp timeout

<b>Command</b>	<b>lacp timeout {short   long}</b> <b>no lacp timeout</b>
<b>parameter</b>	-
<b>default</b>	Long.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	Set the timeout mode of LACP protocol.
<b>Example</b>	Set the timeout mode as short in LACP protocol.  <b>Switch(Config-If-Ethernet1/0/1)#lacp timeout short</b>

## load-balance

<b>Command</b>	<b>load-balance {src-mac   dst-mac   dst-src-mac   src-ip   dst-ip   dst-src-ip   ingress-port   dst-src-mac-ip}</b> <b>no load-balance</b>
<b>parameter</b>	<b>src-mac:</b> performs load-balance according to the source MAC <b>dst-mac:</b> performs load-balance according to the destination MAC <b>dst-src-mac:</b> performs load-balance according to the source and destination MAC <b>src-ip:</b> performs load-balance according to the source IP <b>dst-ip:</b> performs load-balance according to the destination IP <b>dst-src-ip:</b> performs load-balance according to the destination and source IP <b>ingress-port:</b> performs load-balance according to the destination and source mac and destination, source IP <b>dst-src-mac-ip:</b> performs load-balance according to the port of receive flow.
<b>default</b>	Perform load-balance according to the source MAC.
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	Use port-channel to implement load-balance, user can configure the load-balance mode according to the requirements. If the specific load-balance mode of the command line is different with the current load-balance mode of port-group, then modify the load-balance of port-group as the specific load-balance of command line; otherwise return a message to notice that the current mode is already configured.
<b>Example</b>	Set load-balance mode of port-group. <b>Switch(config)#load-balance src-mac</b>

## port-group

<b>Command</b>	<b>port-group &lt;port-group-number&gt;</b> <b>no port-group &lt;port-group-number&gt;</b>
<b>parameter</b>	<b>port-group-number:</b> is the group number of a port channel from 1~128.
<b>default</b>	There is no port-group.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	It can create 16 port group at most.
<b>Example</b>	To create a port group. <b>Switch(config)# port-group 1</b>  To delete a port group. <b>Switch(config)#no port-group 1</b>

## port-group mode

<b>Command</b>	<b>port-group &lt;port-group-number&gt;mode {active   passive   on}</b> <b>no port-group</b>
<b>parameter</b>	port-group-number: is the group number of port channel, from 1~128 <b>active:</b> enables LACP on the port and sets it in Active mode <b>passive:</b> enables LACP on the port and sets it in Passive mode <b>on:</b> forces the port to join a port channel without enabling LACP.
<b>default</b>	Switch ports do not belong to a port channel by default; LACP not enabled by default.
<b>Mode</b>	Port Mode.
<b>Usage Guide</b>	Add a physical port to the port channel NO remove the specified port from the port channel.
<b>Example</b>	Under the Port Mode of Ethernet1/0/1, add current port to "port-group 1" in "active" mode.  <b>Switch(Config-If-Ethernet1/0/1)#port-group 1 mode active</b>

## show port-group

<b>Command</b>	<b>show port-group [&lt;port-group-number&gt;] {brief   detail  }</b>															
<b>parameter</b>	<b>port-group-number:</b> is the group number of port channel to be displayed, from 1~128.															
<b>default</b>	-															
<b>Mode</b>	All Configuration Mode.															
<b>Usage Guide</b>	If the user does not input port-group-number, that means the information of all the existent port-group are showed; if the port channel corresponds to port-group-number parameter and is not exist, then print an error message, otherwise display the current port-channel information of the specified group number.															
<b>Example</b>	<p>Display summary information for port-group 1</p> <p><b>Switch#show port-group brief</b></p> <p>ID: port group number;      Mode: port group mode such as on active or passive;      Ports: different types of port number of a port group, the first is selected ports number, the second is standby ports number, and the third is unselected ports number.</p> <table> <thead> <tr> <th>ID</th> <th>Mode</th> <th>Partner ID</th> <th>Ports</th> <th>Load-balance</th> </tr> </thead> <tbody> <tr> <td>-----</td> <td>-----</td> <td>-----</td> <td>-----</td> <td>-----</td> </tr> <tr> <td>1</td> <td>active</td> <td>0x0000,00-00-00-00-00-00</td> <td>0,0,1</td> <td>src-mac</td> </tr> </tbody> </table>	ID	Mode	Partner ID	Ports	Load-balance	-----	-----	-----	-----	-----	1	active	0x0000,00-00-00-00-00-00	0,0,1	src-mac
ID	Mode	Partner ID	Ports	Load-balance												
-----	-----	-----	-----	-----												
1	active	0x0000,00-00-00-00-00-00	0,0,1	src-mac												

## 7. Commands for MTU

### mtu

<b>Command</b>	<b>mtu [&lt;mtu-value&gt;]</b> <b>no mtu</b>
<b>parameter</b>	<i>mtu-value</i> : the MTU value of frames that can be received, in byte, ranging from <1500-12270>. The corresponding frame size is <1518/1522-12288/12292>. Without setting parameter, the allowed max frame size is 12288/12292.
<b>default</b>	MTU function not enabled by default.
<b>Mode</b>	Global Mode.
<b>Usage Guide</b>	Set switch of both ends mtu necessarily, or mtu frame will be dropped at the switch has not be set.
<b>Example</b>	Enable the mtu function of the switch.  <b>Switch(config)#mtu</b>

## 8. Commands for EFM OAM

### clear ethernet-oam

<b>Command</b>	<b>clear ethernet-oam [interface {ethernet  } &lt;IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> the name of the port needs to clear OAM statistic information
<b>default</b>	N/A
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Clears the statistic information of OAM packets and link event on all ports.
<b>Example</b>	To clear the statistic information of OAM packets and link event on all ports.  <b>Switch(config)#clear ethernet-oam</b>

### ethernet-oam

<b>Command</b>	<b>ethernet-oam no ethernet-oam</b>
<b>parameter</b>	-
<b>default</b>	Disable
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Enables Ethernet-oam.
<b>Example</b>	To enable ethernet-oam of Ethernet 1/0/4  <b>Switch(config)#interface ethernet 1/0/4</b> <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam</b>

## ethernet-oam errored-frame threshold high

<b>Command</b>	<b>ethernet-oam errored-frame threshold high {&lt;high-frames&gt;   none}</b> <b>no ethernet-oam errored-frame threshold high</b>
<b>parameter</b>	<b>high-frames:</b> the high detection threshold of errored frame event, ranging from 2 to 4294967295. <b>none:</b> cancel the high threshold configuration.
<b>default</b>	<b>none</b>
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	During the specific detection period, serious link event is induced if the number of errored frame is larger than or equal to the high threshold and the device notifies the peer by sending Information OAMPDU of which the value of Link Fault flag in Flags field is 1. Note that the high threshold cannot be less than the low threshold.
<b>Example</b>	Configure the high threshold of errored frame event on Ethernet 1/0/4 to be 3000.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame threshold high 3000</b>

## ethernet-oam errored-frame threshold low

<b>Command</b>	<b>ethernet-oam errored-frame threshold low &lt;low-frames&gt;</b> <b>no ethernet-oam errored-frame threshold low</b>
<b>parameter</b>	low-frames: the low detection threshold of errored frame event, ranging from 1 to 4294967295
<b>default</b>	1
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	During the specific detection period, errored frame event is induced if the number of errored frame is larger than or equal to the low threshold and the device notifies the peer by sending event notification OAMPDU. Note that the low threshold cannot be larger than the high threshold.
<b>Example</b>	Configure the low threshold of errored frame event on Ethernet 1/0/4 to 100.

	<b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame threshold low 100</b>
--	---

### **ethernet-oam errored-frame window**

<b>Command</b>	<b>ethernet-oam errored-frame window &lt;seconds&gt;</b> <b>no ethernet-oam errored-frame window</b>
<b>parameter</b>	Seconds: is the time for counting the specified frame number, its range from 5 to 300, unit is 200ms
<b>default</b>	5
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Detect the errored frame number of the port after the time of specific detection period. If the number of errored frame is larger than or equal to the threshold, bring the corresponding event and notify the peer through OAMPDU.
<b>Example</b>	Configure the detection period of errored frame event on port1/0/4 to be 20s.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame window 100</b>

### **ethernet-oam errored-frame-seconds threshold high**

<b>Command</b>	<b>ethernet-oam errored-frame-seconds threshold high {&lt;high-seconds&gt;   none}</b> <b>no ethernet-oam errored-frame-seconds threshold high</b>
<b>parameter</b>	high-seconds: the high detection threshold of errored frame period event,ranging from 2 to 4294967295. <b>none:</b> cancel the high threshold configuration.
<b>default</b>	none
<b>Mode</b>	Port mode
<b>Usage Guide</b>	During the specific detection period, serious link event is induced if the number of errored frame is larger than or equal to the high threshold and the device notifies the peer by sending Information OAMPDU of which

	the value of Link Fault flag in Flags field is 1. Note that the high threshold cannot be less than the low threshold.
<b>Example</b>	Configure the high threshold of errored frame period event on port 1/0/4 to be 3000.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame-seconds threshold high 3000</b>

### **ethernet-oam errored-frame-seconds threshold Low**

<b>Command</b>	<b>ethernet-oam errored-frame-seconds threshold low &lt;low-seconds&gt;</b> <b>no ethernet-oam errored-frame-seconds threshold low</b>
<b>parameter</b>	<b>low-seconds:</b> the low detection threshold of errored frame seconds event, ranging from 1 to 65535 seconds.
<b>default</b>	1
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	During the specific detection period, errored frame period event is induced if the number of errored frame is larger than or equal to the low threshold and the device notifies the peer by event notification OAMPDU. Note that the low threshold should not be larger than the high threshold.
<b>Example</b>	Configure the low threshold of errored frame period event on port 1/0/4 to be 100.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame-seconds threshold low 100</b>

### **ethernet-oam errored-frame-seconds window**

<b>Command</b>	<b>ethernet-oam errored-frame-seconds window &lt;seconds&gt;</b> <b>no ethernet-oam errored-frame-seconds window</b>
<b>parameter</b>	<b>Seconds:</b> is the time for counting the specified frame number, its range from 50 to 450, unit is 200ms.
<b>default</b>	300
<b>Mode</b>	Port mode.

<b>Usage Guide</b>	Detects errored frame seconds of the port after the time of specific detection period. If the number of errored frame seconds is larger than or equal to the threshold, corresponding event is induced and the device notified the peer through OAMPDU.
<b>Example</b>	Configure the detection period of errored frame seconds event on port 1/0/4 to be 120s.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-frame-seconds window 600</b>

### **ethernet-oam errored-symbol-period threshold High**

<b>Command</b>	<b>ethernet-oam errored-symbol-period threshold high {&lt;high-symbols&gt;   none}</b> <b>no ethernet-oam errored-symbol-period threshold high</b>
<b>parameter</b>	<b>high-symbols:</b> the high detection threshold of errored symbol event, ranging from 2 to 18446744073709551615 symbols. <b>none:</b> cancel the high threshold configuration.
<b>default</b>	None.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	During the specific detection period, serious link event is induced if the number of errored symbols is larger than or equal to the high threshold and the device notifies the peer by sending Information OAMPDU of which the value of Link Fault flag in Flags field is 1. Note that the high threshold should not be less than the low threshold.
<b>Example</b>	Set the high threshold of errored symbol event on port 1/0/4 to none.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-symbol-period threshold high none</b>

## **ethernet-oam errored-symbol-period threshold Low**

<b>Command</b>	<b>ethernet-oam errored-symbol-period threshold low &lt;low-symbols&gt;</b> <b>no ethernet-oam errored-symbol-period threshold low</b>
<b>parameter</b>	<b>low-symbols:</b> the low threshold of errored symbol event, ranging from 1 to 18446744073709551615 symbols.
<b>default</b>	1
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	During the specific detection period, errored symbol event is induced if the number of errored symbols is larger than or equal to the low threshold and the device notifies the peer by sending event notification OAMPDU. Note that the low threshold should not be larger than the high threshold.
<b>Example</b>	Set the low threshold of errored symbol event on port 1/0/4 to be 5.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-symbol-period threshold low 5</b>

## **ethernet-oam errored-symbol-period window**

<b>Command</b>	<b>ethernet-oam errored-symbol-period window &lt;seconds&gt;</b> <b>no ethernet-oam errored-symbol-period window</b>
<b>parameter</b>	<b>Seconds:</b> is the time for counting the specified frame number, its range from 5 to 300, unit is 200ms.
<b>default</b>	5
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Detect errored symbols of the port after the time of specific detection period. If the number of errored symbols is larger than or equal to the threshold, corresponding event is induced and the device notified the peer through OAMPDU.
<b>Example</b>	Set the detection period of errored symbol event on port 1/0/4 to be 2s.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam errored-symbol-period window 10</b>

## ethernet-oam link-monitor

<b>Command</b>	<b>ethernet-oam link-monitor</b> <b>no ethernet-oam link-monitor</b>
<b>parameter</b>	-
<b>default</b>	Enable.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Enables OAM to monitor local link errors. Generally link monitor is enabled when enabling OAM function of the port. When OAM link monitor is disabled, although local link error is not monitored, Event information OAMPDU from the peer is still normally received and processed.
<b>Example</b>	Enable the link monitor of port 1/0/4. <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam link-monitor</b>

## ethernet-oam mode

<b>Command</b>	<b>ethernet-oam mode {active   passive}</b> <b>no ethernet-oam mode</b>
<b>parameter</b>	active: active mode passive: passive mode
<b>default</b>	Active mode.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	At least one of the two connected OAM entities should be configured to active mode. Once OAM is enabled, the working mode of OAM cannot be changed and you need to disable OAM function if you have to change the working mode.
<b>Example</b>	Set the mode of OAM function on ethernet 1/0/4 to passive mode. <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam mode passive</b>

## ethernet-oam period

<b>Command</b>	<b>ethernet-oam period &lt;seconds&gt;</b> <b>no ethernet-oam mode</b>
<b>parameter</b>	<b>seconds:</b> sending period, ranging from 1 to 2 seconds.
<b>default</b>	1s
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Use this command to configure the transmission interval of Information OAMPDU which keep OAM connection normally.
<b>Example</b>	Set the transmission interval of Information OAMPDU for ethernet 1/0/4 to be 2s.  <b>Switch(Config-If-Ethernet1/0/4)# ethernet-oam period 2</b>

## ethernet-oam remote-failure

<b>Command</b>	<b>ethernet-oam remote-failure</b> <b>no ethernet-oam remote-failure</b>
<b>parameter</b>	-
<b>default</b>	Enable
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	With remote failure indication is enabled, if critical-event or link fault event is occurred locally, it will notify the peer by sending Information OAMPDU, log the fault information and send SNMP trap warning. When the remote failure indication is disabled, although local critical-event or link fault event is not monitored, failure indication information from the peer is still normally received and processed.
<b>Example</b>	Enable remote failure indication of ethernet 1/0/4.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam remote-failure</b>

## ethernet-oam remote-loopback

<b>Command</b>	<b>ethernet-oam remote-loopback</b> <b>no ethernet-oam remote-loopback</b>
<b>parameter</b>	-
<b>default</b>	Disable.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Only OAM can send remote loopback request in auto mode, the OAM work in passive mode cannot send remote loopback; when remote OAM working in loopback mode, all packets except OAM PDU packets will back local port according to the same route (Notice: during OAM loopback, it cannot communicate), administrator can check the link delay of loopback, shake and throughput capacity. It can do loopback configuration after create OAM link, if OAM link is broken during loopback, the loopback will be cancel automatically. The command mutex with ethernet-oam remote-loopback supported.
<b>Example</b>	Enable the remote OAM of port 1/0/4 to remote loopback mode.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam remote-loopback</b> Normal forwarding will be suspended during the remote-loopback, are you sure to start remote-loopback? [Y/N]

## ethernet-oam remote-loopback supported

<b>Command</b>	<b>ethernet-oam remote-loopback supported</b> <b>no ethernet-oam remote-loopback supported</b>
<b>parameter</b>	-
<b>default</b>	Disable.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	The port that only enable loopback support function can receive OAM loopback request and in loopback mode. So when enable remote and in OAM loopback, please ensure remote configured loopback support. The command mutex with ethernet-oam remote-loopback.
<b>Example</b>	Enable OAM loopback support function of ethernet 1/0/4

	<b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam remote-loopback supported</b>
--	---

## ethernet-oam timeout

<b>Command</b>	<b>ethernet-oam timeout &lt;seconds&gt;</b> <b>no ethernet-oam timeout</b>
<b>parameter</b>	<b>seconds:</b> the timeout ranging from 5 to 10 seconds.
<b>default</b>	5s.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	OAM connection will be disconnected if no OAMPDU is received after specified timeout.
<b>Example</b>	Set the timeout of OAM connection for ethernet 1/0/4 to be 6 seconds.  <b>Switch(Config-If-Ethernet1/0/4)#ethernet-oam timeout 6</b>

## show ethernet-oam

<b>Command</b>	<b>show ethernet-oam [{local   remote} interface {ethernet   } &lt;/IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> the port that OAM connection information will be shown
<b>default</b>	N/A.
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	N/A.
<b>Example</b>	Show overview information of Ethernet OAM connection. <b>Switch#show ethernet-oam</b> <b>Switch#show ethernet-oam</b> Capability codes: L - Link Monitor, R - Remote Loopback U - Unidirection, V - Variable Retrieval -----           -----           Interface Local-Mode Local-Capability Remote-MAC-Addr Remote- Mode Remote-Capability 1/0/1 active L

## show ethernet-oam events

<b>Command</b>	<b>show ethernet-oam events {local   remote} [interface {ethernet  } &lt;IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> the port that the statistic information of OAM link events needs to be shown
<b>default</b>	N/A.
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	N/A.
<b>Example</b>	<p>Show the statistic information of link events on Ethernet 1/0/1.</p> <pre><b>Switch#show ethernet-oam events local interface ethernet 1/0/1</b></pre> <p>ethernet1/0/1 link-events :</p> <p>OAM_local_errorred-symbol-period-events:</p> <hr/> <p>-----</p> <p>event time stamp : 3539 errorred symbol window(200ms) : 5  errorred symbol low threshold : 1 errorred symbol high threshold : none  errorred symbol : 1200120 errorred running total : 2302512542  event running total : 232</p> <p>OAM_local_errorred-frame-period-events:</p> <hr/> <p>-----</p> <p>event time stamp : 3539 errorred frame window(200ms) : 50  errorred frame low threshold : 1 errorred frame high threshold : none  errorred frame : 1200120 errorred running total : 2302512542  event running total : 52</p> <p>OAM_local_errorred-frame-events:</p> <hr/> <p>-----</p> <p>event time stamp : 3539 errorred frame window(200ms) : 5  errorred frame low threshold : 1 errorred frame high threshold : none  errorred frame : 1200120 errorred running total : 2302512542  event running total : 75</p> <p>OAM_local_errorred-frame-seconds-summary-events:</p> <hr/> <p>-----</p> <p>event time stamp : 3520 errorred frame seconds summary window(200ms) : 300  errorred frame low threshold : 1 errorred frame high threshold : none  errorred frame : 1200120 errorred running total : 2302512542  event running total : 232</p> <p>OAM_local_link-fault : 0</p>

	OAM_local_dying_gasp : 0 OAM_local_critical_event : 0
--	--

## show ethernet-oam link-events-configuration

<b>Command</b>	<b>show ethernet-oam link-events-configuration [interface {ethernet   } &lt;IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> the port that the statistic information of OAM link events needs to be shown
<b>default</b>	N/A.
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	N/A.
<b>Example</b>	<p>Show configuration of link events on ethernet 1/0/1.</p> <pre><b>Switch#show ethernet-oam link-events-configuration interface ethernet 1/0/1</b></pre> <p>Ethernet1/0/1 link-monitor configuration : event high-threshold low-threshold window(200ms)</p> <hr/> <p>Err-symbol-Period none 12 Err-frame-Period none 110 Err-frame none 2 5 Err-frame-second-summary none 2 600</p> <hr/>

## show ethernet-oam loopback status

<b>Command</b>	<b>show ethernet-oam loopback status [interface {ethernet   }&lt;IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> means display the port of OAM loopback status information
<b>default</b>	N/A.
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Displays the loopback status OAM all or specified ports of the switch
<b>Example</b>	<p>Display the OAM loopback status of all port.</p> <p><b>Switch(config)#show ethernet-oam loopback-status</b></p> <p>OAM Loopback Status:      Ethernet1/0/1: disable      Ethernet1/0/2: disable      Ethernet1/0/3: disable</p>

## 9. Commands for PORT SECURITY

### clear port-security

<b>Command</b>	<b>clear port-security {all   configured   dynamic   sticky} [[address &lt;mac-addr&gt;  interface &lt;interface-id&gt;] [vlan&lt;vlan-id&gt;]]</b>
<b>parameter</b>	<b>all:</b> All secure MAC entries on the interfaces <b>configured:</b> The configured secure MAC <b>dynamic:</b> The dynamic secure MAC learnt by the interface <b>sticky:</b> The secure MAC of sticky <b>mac-addr:</b> The specified secure MAC address <b>interface-id:</b> The secure MAC entries of the specified interface <b>vlan-id:</b> The specified VLAN
<b>default</b>	-
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Clears secure MACs on the interface.
<b>Example</b>	Clear all secure MACs on the interface  <b>Switch#clear port-security all</b>

### show port-security

<b>Command</b>	<b>show port-security [interface &lt;interface-id&gt;] [address   vlan]</b>
<b>parameter</b>	<b>interface-id:</b> Show port-security configuration of the interface <b>address:</b> Show the secure address of the interface <b>vlan:</b> Show the maximum number of each VLAN configured on trunk/hybrid interface.
<b>default</b>	-
<b>Mode</b>	Any modes.
<b>Usage Guide</b>	Displays port security configuration.
<b>Example</b>	Show all secure MACs on the interfaces.  <b>Switch# show port-security</b>

## switchport port-security

<b>Command</b>	<b>switchport port-security</b> <b>no switchport port-security</b>
<b>parameter</b>	-
<b>default</b>	Disable.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Configures port security for the interface no disable port security with commands
<b>Example</b>	Enable port-security on the interface.  <b>Switch(config-if- ethernet1/0/1)#switchport port-security</b>

## switchport port-security mac-address

<b>Command</b>	<b>switchport port-security mac-address &lt;mac-address&gt;[vlan&lt;vlan-id&gt;]</b>  <b>no switchport port-security mac-address &lt;mac-address&gt;[vlan &lt;vlan-id&gt;]</b>
<b>parameter</b>	<b>mac-address:</b> Configure the specified MAC address as the static secure MAC. <b>vlan-id:</b> The specified VLAN of the MAC address, it only takes effect on trunk and hybrid interfaces.
<b>default</b>	No secure MAC is bound by the interface.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	When configuring the static secure MAC, pay attention to the number of the current secure MAC whether exceed the maximum MAC limit allowed by the interface. If exceeding the maximum MAC limit, it will result in violation operation.
<b>Example</b>	Configure the secure MAC address on the interface  <b>Switch (config-if- ethernet1/0/1)# switchport port-security mac-address 00-00-00-00-00-01</b>

## switchport port-security maximum

<b>Command</b>	<b>switchport port-security maximum &lt;value&gt;[vlan&lt;vlan-list&gt;] no switchport port-security maximum &lt;value&gt;[vlan&lt;vlan-list&gt;]</b>
<b>parameter</b>	<p><b>value:</b> Configure the maximum number of the secure MAC allowed by the interface, its range between 1 and 128. It is determined by the maximum MAC number of the device</p> <p><b>vlan-list:</b> Configure the maximum value for the specified VLAN, it only takes effect on trunk and hybrid interfaces.</p>
<b>default</b>	After enabling port-security, if there is no other configuration, the maximum number of the secure MAC is 1 on the interface. The interface number in VLAN is no limit by default.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Pay attention to the coupling relation about the number between the interface and VLAN, set the maximum number configured by the interface as the standard firstly.
<b>Example</b>	Configure the maximum number of the secure MAC on the interface. <pre>Switch(config-if- ethernet1/0/1)# switchport port-security maximum 100</pre>

## switchport port-security violation

<b>Command</b>	<b>switchport port-security violation {protect   recovery   restrict   shutdown} no switchport port-security violation</b>
<b>parameter</b>	<p><b>Protect:</b> Protect mode, it will trigger the action that do not learn the new MAC, drop the package and do not send the warning</p> <p><b>Recovery:</b> After triggering the violation action of the port, the mac learning function can be recovered</p> <p><b>restrict:</b> Restrict mode, it will trigger the action that do not learn the new MAC, drop the package, send snmp trap and record the configuration in syslog.</p> <p><b>Shutdown:</b> Shutdown mode is the default mode. Under this condition, the interface is disabled directly, send snmp trap and record the configuration in syslog.</p>
<b>default</b>	<b>shutdown</b>
<b>Mode</b>	Port mode.

<b>Usage Guide</b>	When exceeding the maximum number of the configured MAC addresses, MAC address accessing the interface does not belong to this interface in MAC address table or a MAC address is configured to several interfaces in same VLAN, both of them will violate the security of the MAC address.
<b>Example</b>	<p>Configure violation mode as protect for the interface.</p> <pre><b>Switch(config-if-ethernet1/0/1)#switchport port-security violation protect</b></pre>

## 10. Commands for DDM

### clear transceiver threshold-violation

<b>Command</b>	<b>clear transceiver threshold-violation [interface ethernet &lt;interface-list&gt;]</b>
<b>parameter</b>	<b>interface-list:</b> The interface list that the threshold violation of the transceiver monitoring needs to be cleared.
<b>default</b>	-
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Clears threshold violations monitored by transceivers.
<b>Example</b>	<p>Clear the threshold violation of the transceiver monitoring on port 21, 25, 26, 28.</p> <pre>Switch#clear transceiver threshold-violation interface ethernet 1/0/21;25-26;28</pre>

### show transceiver

<b>Command</b>	<b>show transceiver [interface ethernet &lt;interface-list&gt;] [detail]</b>																		
<b>parameter</b>	<b>interface-list:</b> The interface list that the monitoring of the transceiver needs to be shown. <b>detail:</b> Show the detailed monitoring of the transceiver.																		
<b>default</b>	-																		
<b>Mode</b>	User mode, admin mode and global mode																		
<b>Usage Guide</b>	Displays the transceiver's detailed monitoring information.																		
<b>Example</b>	<p>Show the brief DDM information of all ports.</p> <pre>Switch#show transceiver</pre> <table> <thead> <tr> <th>Interface</th> <th>Temp°C</th> <th>Voltage(V)</th> <th>Bias(mA)</th> <th>RX PowerdBm</th> <th>TX PowerdBm</th> </tr> </thead> <tbody> <tr> <td>1/0/25</td> <td>33</td> <td>3.31</td> <td>6.11</td> <td>-30.54(A-)</td> <td>-6.01</td> </tr> <tr> <td>1/0/26</td> <td>33</td> <td>5.00 (W+)</td> <td>6.11</td> <td>-20.54(W-)</td> <td>-6.02</td> </tr> </tbody> </table>	Interface	Temp°C	Voltage(V)	Bias(mA)	RX PowerdBm	TX PowerdBm	1/0/25	33	3.31	6.11	-30.54(A-)	-6.01	1/0/26	33	5.00 (W+)	6.11	-20.54(W-)	-6.02
Interface	Temp°C	Voltage(V)	Bias(mA)	RX PowerdBm	TX PowerdBm														
1/0/25	33	3.31	6.11	-30.54(A-)	-6.01														
1/0/26	33	5.00 (W+)	6.11	-20.54(W-)	-6.02														

## show transceiver threshold-violation

<b>Command</b>	<b>show transceiver threshold-violation [interface ethernet &lt;interface-list&gt;]</b>																																			
<b>parameter</b>	<b>interface-list:</b> The interface list that the transceiver monitoring needs to be shown.																																			
<b>default</b>	-																																			
<b>Mode</b>	Admin mode and global mode.																																			
<b>Usage Guide</b>	Show the transceiver monitoring.																																			
<b>Example</b>	<p>Show the transceiver monitoring</p> <p><b>Switch(config)#show transceiver threshold-violation interface ethernet 1/0/25-26</b></p> <p>Ethernet 1/0/25 transceiver threshold-violation information :      Transceiver monitor is enabled. Monitor interval is set to 30 minutes.      The current time is Jan 02 12:30:50 2010.      The last threshold-violation time is Jan 01 1:30:50 2010.      Brief alarm information:      RX loss of signal      RX power low      Detail diagnostic and threshold information:      Diagnostic Threshold</p> <table> <thead> <tr> <th>Realtime Value</th> <th>High Alarm</th> <th>Low Alarm</th> <th>High Warn</th> <th>Low Warn</th> </tr> </thead> <tbody> <tr> <td>Temperature (°C)</td> <td>33</td> <td>70</td> <td>0</td> <td>70</td> <td>0</td> </tr> <tr> <td>Voltage (V)</td> <td>7.31</td> <td>10.00</td> <td>0.00</td> <td>5.00</td> <td>0.00</td> </tr> <tr> <td>Bias current (mA)</td> <td>3.11</td> <td>10.30</td> <td>0.00</td> <td>5.00</td> <td>0.00</td> </tr> <tr> <td>RX Power (dBm)</td> <td>-30.54(A-)</td> <td>9.00</td> <td>-25.00 (-34)</td> <td>9.00</td> <td>-25.00</td> </tr> <tr> <td>TX Power (dBm)</td> <td>-1.01</td> <td>9.00</td> <td>-12.05</td> <td>9.00</td> <td>-10.00</td> </tr> </tbody> </table> <p>Ethernet 1/0/26 transceiver threshold-violation information:      Transceiver monitor is disabled. Monitor interval is set to 30 minutes.      The last threshold-violation doesn't exist.</p>	Realtime Value	High Alarm	Low Alarm	High Warn	Low Warn	Temperature (°C)	33	70	0	70	0	Voltage (V)	7.31	10.00	0.00	5.00	0.00	Bias current (mA)	3.11	10.30	0.00	5.00	0.00	RX Power (dBm)	-30.54(A-)	9.00	-25.00 (-34)	9.00	-25.00	TX Power (dBm)	-1.01	9.00	-12.05	9.00	-10.00
Realtime Value	High Alarm	Low Alarm	High Warn	Low Warn																																
Temperature (°C)	33	70	0	70	0																															
Voltage (V)	7.31	10.00	0.00	5.00	0.00																															
Bias current (mA)	3.11	10.30	0.00	5.00	0.00																															
RX Power (dBm)	-30.54(A-)	9.00	-25.00 (-34)	9.00	-25.00																															
TX Power (dBm)	-1.01	9.00	-12.05	9.00	-10.00																															

## transceiver-monitoring

<b>Command</b>	<b>transceiver-monitoring {enable   disable}</b>
<b>parameter</b>	-
<b>default</b>	Disabled.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Enables/disables transceiver monitoring.
<b>Example</b>	<p>Enable the transceiver monitoring of ethernet1/0/1.</p> <pre><b>Switch(config-if-ethernet1/0/1)#transceiver-monitoring enable</b></pre>

## transceiver-monitoring interval

<b>Command</b>	<b>transceiver-monitoring interval &lt;minutes&gt;</b> <b>no transceiver-monitoring interval</b>
<b>parameter</b>	<b>minutes:</b> The interval of the transceiver monitoring needs to be set.
<b>default</b>	15 minutes.
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	Sets the interval for transceiver monitoring. No command sets the interval to the default interval of 15 minutes.
<b>Example</b>	<p>Set the interval of the transceiver monitoring as 1 minute.</p> <pre><b>Switch(config)#transceiver-monitoring interval 1</b></pre>

## transceiver threshold

<b>Command</b>	<b>transceiver threshold {default   {temperature   voltage   bias   rx-power   tx-power} {high-alarm   low-alarm   high-warn   low-warn} {&lt;value&gt;   default}}</b>
<b>parameter</b>	<p><b>default:</b> Restore the threshold as the default threshold set by the manufacturer. If the monitoring index is not specified, restore all thresholds, if the monitoring index is specified, restore the corresponding threshold only.</p> <p><b>Temperature:</b> The monitoring index–temperature</p> <p><b>Voltage:</b> The monitoring index–voltage</p> <p><b>Bias:</b> The monitoring index–bias current</p> <p><b>rx-power:</b> The monitoring index–receiving power</p> <p><b>tx-power:</b> The monitoring index–sending power</p> <p><b>high-alarm:</b> High-alarm of the monitoring index, namely there is alarm with A+ if exceeding the threshold.</p> <p><b>low-alarm:</b> Low-alarm of the monitoring index, namely there is alarm with A if exceeding the threshold.</p> <p><b>high-warn:</b> High-warn of the monitoring index, namely there is warning with W+ if exceeding the threshold.</p> <p><b>low-warn:</b> Low-warn of the monitoring index, namely there is warning with W- if exceeding the threshold.</p>
<b>default</b>	The threshold is set by the manufacturer
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	<p>The range of the threshold parameters is shown for each monitoring index in the following :</p> <p>Temperature: -128.00~128.00 °C</p> <p>Voltage: 0.00~7.00 V</p> <p>Bias current: 0.00~140.00 mA</p> <p>x-power: -50.00~9.00 dBm</p> <p>tx-power: -50.00~9.00 dBm</p> <p>The maximum length of the threshold parameter configured by the user is 20 bits. After the user configured a parameter threshold, the threshold set by the manufacturer will be labeled with the bracket when showing the threshold, and decide whether give an alarm according to the user's configuration.</p>
<b>Example</b>	<p>Configure tx-power threshold of the fiber module, the low-warn threshold is configured as -12 on ethernet1/0/1.</p> <pre>Switch(config-if-ethernet1/0/1)#transceiver threshold tx-power low-warn -12</pre>

## 11. Commands for LLDP-MED

### civic location

<b>Command</b>	<b>civic location {dhcp server   switch   endpointDev} &lt;country-code&gt;</b> <b>no civic location</b>
<b>parameter</b>	<b>dhcp server:</b> Set device type to be DHCP server <b>switch:</b> Set device type to be Switch <b>endpointDev:</b> Set device type to be LLDP-MED Endpoint <b>country-code:</b> Set country code which consist of 2 letters, such as DE or US, it should accord the country code of ISO 3166 standard.
<b>default</b>	No location with Civic Address LCI format is configured on the port.
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	Configures device type and country code of the location with Civic Address LCI format and enter Civic Address LCI address mode to configure the more detailed location.
<b>Example</b>	Configure device type as switch and country code as US for the location with Civic Address LCI format on Ethernet 19.  <b>Switch(Config-If-Ethernet1/0/19)# civic location switch US</b> <b>Switch(Med-Civic)#</b>

{description-language | province-state | city | county | street |  
locationNum | location | floor | room | postal | otherInfo}

<b>Command</b>	<b>{description-language   province-state   city   county   street   locationNum   location   floor   room   postal   otherInfo}</b> <b>&lt;address&gt;</b> <b>no {description-language   province-state   city   county   street   locationNum   location   floor   room   postal   otherInfo}</b>
<b>parameter</b>	<b>description-language:</b> language for describing location, such as 'English' <b>province-state:</b> state, canton, region, province prefecture, and so on, such as 'Delhi' <b>city:</b> city, such as 'Delhi' <b>county:</b> county, parish, such as 'rohini' <b>street:</b> street, such as '15 vasantvihar' <b>locationNum:</b> house number, such as '9' <b>location:</b> name and occupant of a location, such as 'Chandni Chawk'

	<p>Market'</p> <p><b>floor:</b> floor number, such as '13'</p> <p><b>room:</b> room number, such as '308'</p> <p><b>postal:</b> postal/zip code, such as '110001'</p> <p><b>otherInfo:</b> Additional location information, such as 'South Delhi'</p> <p><b>address:</b> detailed address information, it cannot exceed 250 characters.</p>
<b>default</b>	No detailed information of the location with Civic Address LCI is configured on the port.
<b>Mode</b>	Civic Address LCI address mode
<b>Usage Guide</b>	With this command, configure the detailed information of the location with Civic Address LCI on the port, it is able to configure 10 kinds of address types at most.
<b>Example</b>	<p>Configure the detailed location information in Civic Address LCI address mode.</p> <p><b>Switch(Med-Civic)# city Delhi</b>  <b>Switch(Med-Civic)# street XYZ.</b></p>

## ecs location

<b>Command</b>	<b>ecs location &lt;tel-number&gt;</b> <b>no ecs location</b>
<b>parameter</b>	<b>tel-number:</b> location characters with ECS ELIN format, such as emergent telephone number, it is character string with the length between 10 and 25.
<b>default</b>	No location with ECS ELIN format is configured.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Length range of the location character string between 10 and 25 with ECS ELIN format.
<b>Example</b>	<p>Configure the location of ECS ELIN format on port 19.</p> <p><b>Switch(Config-If-Ethernet1/0/19)# ecs location 880-445-3381</b></p>

## lldp med fast count

<b>Command</b>	<b>lldp med fast count &lt;value&gt;</b> <b>no lldp med fast count</b>
<b>parameter</b>	<b>Value:</b> The number of sending the packets fast, its range from 1 to 10, unit is entries.
<b>default</b>	4
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	With this command, set the number for sending the packets fast.
<b>Example</b>	Set the number of quick packages to 5 <b>Switch(config)# lldp med fast count 5</b>

## lldp med trap

<b>Command</b>	<b>lldp med trap {enable   disable}</b>
<b>parameter</b>	-
<b>default</b>	Disabled.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Enables or disables LLDP-MED TRAP of the port.
<b>Example</b>	Enable LLDP-MED TRAP of the port 19. <b>Switch(Config-If-Ethernet1/0/19)# lldp med trap enable</b>

## lldp transmit med tlvall

<b>Command</b>	<b>lldp transmit med tlvall</b> <b>no lldp transmit med tlvall</b>
<b>parameter</b>	-
<b>default</b>	Port does not enable the function for Sending LLDP-MED TLV.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	After configuring this command, if the port is able to send LLDP-MED TLV, the sent LLDP packets with LLDP-MED TLV supported by all

	switches. However, LLDP packets sent by the port without any LLDP-MED TLV after the switch configured the corresponding no command.
<b>Example</b>	Port 19 enables the function for sending LLDP-MED TLV. <b>Switch(Config-If-Ethernet1/0/19)# lldp transmit med tlv all</b>

### **lldp transmit med tlvcapability**

<b>Command</b>	<b>lldp transmit med tlvcapability</b> <b>no lldp transmit med tlvcapability</b>
<b>parameter</b>	-
<b>default</b>	The function is disabled for sending LLDP-MED Capability TLV.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	After configuring this command, if the port is able to send LLDP-MED TLV, the sent LLDP packets with LLDP-MED Capability TLV. However, LLDP packets sent by the port without LLDP-MED Capability TLV after the switch configured the corresponding no command. Note: LLDP-MED Capability TLV is the important LLDP-MED TLV, if do not configure the port to send LLDP-MED Capability TLV firstly, other LLDP-MED TLV will not be sent.
<b>Example</b>	Port 19 enables the function for sending LLDP-MED Capability TLV. <b>Switch(Config-If-Ethernet1/0/19)# lldp transmit med tlv capability</b>

### **lldp transmit med tlvextend Poe**

<b>Command</b>	<b>lldp transmit med tlvextend Poe</b> <b>no lldp transmit med tlvextend Poe</b>
<b>parameter</b>	-
<b>default</b>	The function is disabled for sending LLDP-MED Extended Power-Via-MDI TLV.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	Configures specified port to send LLDP-MED extended power supply - Via-MDITLV. No command disables the function.

<b>Example</b>  <b>Switch(Config-If-Ethernet1/0/19)# ll dp transmit med tlvextend Poe</b>	Port 19 enables the function for sending LLDP-MED Extended Power-Via-MDI TLV.
---	---

### ll dp transmit med tlv location

<b>Command</b>  <b>dp transmit med tlv location</b> <b>no ll dp transmit med tlv location</b>	
<b>parameter</b>  -	
<b>default</b>  Disable.	
<b>Mode</b>  Port mode.	
<b>Usage Guide</b>  Configures the specified port to send LLDP-MED Location Identification TLV. After configuring this command, if the port has the capability of sending LLDP-MED TLV, the LLDP packets sent from the port will include LLDP-MED Location Identification TLV. Otherwise, the LLDP packets sent from the port will not include LLDP-MED Location Identification TLV by the no command even if the port has the capability of sending LLDP-MED TLV.  <i>Notice: Before configuring this function, the capability of sending LLDP-MED Capability TLV must be configured. If the device does not support POE or the POE function of the port is disabled by the command, this TLV will not be sent.</i>	
<b>Example</b>  <b>Switch(Config-If-Ethernet1/0/19)# ll dp transmit med tlv location</b>	Enable the port 19 to send LLDP-MED Location Identification TLV.

## lldp transmit med tlv inventory

<b>Command</b>	<b>lldp transmit med tlv inventory</b> <b>no lldp transmit med tlv inventory</b>
<b>parameter</b>	-
<b>default</b>	The function is disabled for sending LLDP-MED Inventory Management TLVs.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	After configuring this command, if the port is able to send LLDP-MED TLV, LLDP packets with LLDP-MED Inventory Management TLVs sent by the port. However, LLDP packets without LLDP-MED Inventory Management TLVs sent by the port after the switch configured the corresponding no command. Note: LLDP-MED Capability TLV sent by the port must be configured before sending LLDP-MED Inventory Management TLVs, or else the configuration cannot be successful.
<b>Example</b>	Port 19 enables the function for sending LLDP-MED Inventory Management TLVs.  <b>Switch(Config-If-Ethernet1/0/19)# lldp transmit med tlv inventory</b>

## lldp transmit med tlv networkPolicy

<b>Command</b>	<b>lldp transmit med tlv networkPolicy</b> <b>no lldp transmit med tlv networkPolicy</b>
<b>parameter</b>	-
<b>default</b>	The function is disabled for sending LLDP-MED Network Policy TLV.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	After configuring this command, if the port is able to send LLDP-MED TLV, LLDP packets with LLDP-MED Network Policy TLV sent by the port. However, LLDP packets without LLDP-MED Network Policy TLV sent by the port after the switch configured the corresponding no command. Note: LLDP-MED Capability TLV sent by the port must be configured before sending LLDP-MED Network Policy TLV, or else the configuration cannot be successful.
<b>Example</b>	Port 19 enables the function for sending LLDP-MED Network Policy TLV.

	<b>Switch(Config-If-Ethernet1/0/19)# lldp transmit med tlv networkPolicy</b>
--	--

## network policy

<b>Command</b>	<b>network policy {voice   voice-signaling   guest-voice   guest-voice-signaling   softphone-voice   video-conferencing   streaming-video   video-signaling} [status {enable   disable}] [tag {tagged   untagged}] [vid {&lt;vlan-id&gt;   dot1p}] [cos &lt;cos-value&gt;] [dscp&lt;dscp-value&gt;]</b>  <b>no network policy {voice   voice-signaling   guest-voice   guest-voice-signaling   softphone-voice   video-conferencing   streaming-video   video-signaling}</b>
<b>parameter</b>	<b>status:</b> Whether the network policy is usable. <b>enable:</b> Network Policy of the specified application type has been defined, enable is the default value of the network policy. <b>disable:</b> Network Policy of the specified application type has been defined, disable is the default value of the network policy <b>tag:</b> Configure the specified application to uses tagged or untagged VLAN method <b>tagged:</b> Configure the flow of the specified application to use the tagged vlan method, here, the fields (such as VLAN ID, Layer2 priority and DSCP value) are take effect <b>untagged:</b> Configure the flow without tag for the specified application, the fields (such as VLAN ID, Layer2 priority) are ignored, only DSCP value field takes effect. Untagged is the default value of VLAN method. <b>vid:</b> Configure VLAN ID that the specified application belongs to <b>vlan-id:</b> Configure the value of VLAN ID, its range from 1 to 4094 <b>dot1p:</b> Configure the specified application to tag the flow by using 802.1p priority, at the same time, use vlan 0 to load the flow. <b>cos:</b> Configure the priority of Ethernet frame for VLAN <b>cos-value:</b> Configure the value of Ethernet frame priority for VLAN, its range from 0 to 7, the default value is 5. <b>dscp:</b> Configure DSCP of VLAN. <b>dscp-value:</b> DSCP value input by the user, its range from 0 to 63, the default value is 46
<b>default</b>	No network policy is configured on the port.
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	User is able to configure the network policy of many kinds on a port, but their application types cannot repeat, and a kind of network policy corresponds to a LLDP-MED network policy TLV. If user configures

	multi-policy for a port, it will send multi-LLDP-MED network policy TLV to a LLDP packet. If user does not configure any network policy, no LLDP-MED network policy TLV is sent to LLDP packet.
<b>Example</b>	Configure the network policy with the application type of voice on port 19.  <b>Switch(Config-If-Ethernet1/0/19)# network policy voice tag tagged vid 2 cos 6 dscp 23</b>

## show lldp

<b>Command</b>	<b>show lldp</b>
<b>parameter</b>	-
<b>default</b>	-
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Shows the global LLDP and LLDP-MED configuration.
<b>Example</b>	Show the global LLDP and LLDP-MED configuration  <b>Switch#show lldp</b>  -----LLDP GLOBAL INFORMATIONS----- LLDP has been enabled globally. LLDP enabled port : Ethernet1/0/19 LLDP interval :5 LLDP tx TTL :20 LLDP Notification Interval :5 LLDP tx Delay :1 LLDP-MED FastStart Repeat Count :4 -----END-----

## **show lldp [interface ethernet <IFNAME>]**

<b>Command</b>	<b>show lldp [interface ethernet &lt;IFNAME&gt;]</b>
<b>parameter</b>	IFNAME: port name
<b>default</b>	-
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	Shows LLDP and LLDP-MED configurations on the current port.
<b>Example</b>	<p>Show LLDP and LLDP-MED configuration of the port 19.</p> <p><b>Switch#show lldp interface ethernet 1/0/19</b></p> <p>Port name :Ethernet1/0/19      LLDP Agent Admin status : Both      LLDP Operation TLV : default      LLDP Trap Status : disable      LLDP maxRemote :100      LLDP Overflow handle : discard      LLDP interface remote status : Free      MED Optional TLV : capabilities network Policy location power inventory      MED Trap Status: Enable      MED TLV Transmit Status: Disable      MED Fast Transmit Status: Disable</p>

## **show lldp neighbors**

<b>Command</b>	<b>show lldp neighbors [interface ethernet &lt;IFNAME&gt;]</b>
<b>parameter</b>	<b>IFNAME:</b> Port number; for example :1/0/1
<b>default</b>	-
<b>Mode</b>	Admin mode.
<b>Usage Guide</b>	With this command, checking LLDP and LLDP-MED information of the neighbors after the port received LLDP packets sent by the neighbors.
<b>Example</b>	<p>Show the neighbor information on port 1.</p> <p><b>Switch #show lldp neighbors interface ethernet 1/0/1</b></p> <p>Port name : Ethernet1/0/1      Port Remote Counter :1      TimeMark :20</p>

	ChassisIdSubtype :4 ChassisId :00-03-0f-00-00-02 PortIdSubtype :Local PortId :3 PortDesc :Ethernet1/0/1 SysName :switch SysDesc :switch Device, Compiled Feb 12 17:39:53 2011 SoftWare Version X.X.X.X BootRom Version X.X.X HardWare Version Device serial number Copyright (C) 2001-2011 by Vendor. All rights reserved
--	---

## show lldp traffic

<b>Command</b>	<b>show lldp traffic</b>																		
<b>parameter</b>	-																		
<b>default</b>	-																		
<b>Mode</b>	Admin mode.																		
<b>Usage Guide</b>	After the port received the LLDP packets from the neighbor, this command can be used to view the statistics of the sent and received packets of LLDP and LLDP-MED.																		
<b>Example</b>	<p>View the statistics of the sent and received packets after the LLDP function is enabled.</p> <p><b>Switch(config)#show lldp traffic</b></p> <table> <thead> <tr> <th>PortName</th> <th>Age</th> <th>outFrames</th> <th>DiscardedFrames</th> <th>InErrors</th> <th>FramesIn</th> <th>FramesOut</th> <th>TLVsDiscarded</th> <th>TLVsUnrecognized</th> </tr> </thead> <tbody> <tr> <td>Ethernet1/0/10</td> <td>0</td> <td>0</td> <td>0</td> <td>7</td> <td>0</td> <td>-</td> <td>-</td> <td>-</td> </tr> </tbody> </table>	PortName	Age	outFrames	DiscardedFrames	InErrors	FramesIn	FramesOut	TLVsDiscarded	TLVsUnrecognized	Ethernet1/0/10	0	0	0	7	0	-	-	-
PortName	Age	outFrames	DiscardedFrames	InErrors	FramesIn	FramesOut	TLVsDiscarded	TLVsUnrecognized											
Ethernet1/0/10	0	0	0	7	0	-	-	-											

## 12. Commands for bpdu-tunnel

### Bpdu-tunnel-protocol

<b>Command</b>	<b>bpdu-tunnel-protocol{stp  gvrp  dot1x  user-defined-protocol &lt;name&gt;}</b>  <b>no bpdu-tunnel-protocol {stp  gvrp  dot1x  user-defined-protocol &lt;name&gt;}</b>
<b>parameter</b>	<b>stp:</b> enable bpdu-tunnel-protocol of stp function in port. <b>gvrp:</b> enable bpdu-tunnel-protocol of avrp function in port. <b>dot1x:</b> enable bpdu-tunnel-protocol of dot1x function in port. <b>name:</b> enable bpdu-tunnel-protocol of neme function in port, the protocol name range from 1 to 32 bytes, and it made up with character, data, underline and the head and tail character cannot be underlined.
<b>default</b>	-
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	When finished configuring bpdu-tunnel-protocol destination MAC address of some protocol, users can enable bpdu-tunnel-protocol function of protocol in port. Stp, gvrp or dot1x function mutex with bpdu-tunnel-protocol function in port, namely, if configured stp, gvrp or dot1x function in port, the bpdu-tunnel-protocol function of the protocol configured failed; if configured bpdu-tunnel-protocol function of this protocol in port, stp, gvrp or dot1x function cannot configured in port.
<b>Example</b>	Configure bpdu-tunnel-protocol to enable stp protocol in port 1/0/1.  <b>Switch(Config-If-Ethernet1/0/1)# bpdu-tunnel-protocol stp</b>

## bpdu-tunnel-protocol group-mac

<b>Command</b>	<b>bpdu-tunnel-protocol {stp  gvrp  dot1x} {group-mac &lt;mac&gt;   default-group-mac}</b> <b>no bpdu-tunnel-protocol {stp  gvrp  dot1x}</b>
<b>parameter</b>	<b>stp:</b> configure bpdu-tunnel-protocol mac of stp protocol; <b>gvrp:</b> configure bpdu-tunnel-protocol mac of gvrp protocol; <b>dot1x:</b> configure bpdu-tunnel-protocol mac of dot1x protocol; <b>mac:</b> bpdu-tunnel-protocol mac address must be multicast address and it cannot be protocol saved address, namely address between 01-80-c2-00-00-00 and 01-80-c2-00-00-30; <b>default-group-mac:</b> the default mac address is 01-00-0c-cd-00-02.
<b>default</b>	-
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	This command must be configured before configuresbpdu-tunnel-protocol in port.
<b>Example</b>	Configure 01-01-00-0c -00-02 bpdu-tunnel-protocol of stp protocol.  <b>Switch(Config)# bpdu-tunnel-protocol stp group-mac 01-01-00-0c-00-02</b>

## bpdu-tunnel-protocol protocol-mac

<b>Command</b>	<b>bpdu-tunnel-protocol user-defined-protocol &lt;name&gt; protocol-mac &lt;mac&gt; {group-mac &lt;mac&gt;   default-group-mac}</b>  <b>no bpdu-tunnel-protocol user-defined-protocol &lt;name&gt;</b>
<b>parameter</b>	<b>name:</b> it is the protocol name and the protocol name includes 1 to 32 characters, and it makes up with character, data and underline, the head and tail character cannot be underlined; <b>group-mac &lt;mac&gt;:</b> it is the address of bpdu-tunnel-protocol mac and it must be multicast address, and it is not protocol saved address, namely the address between 01-80-c2-00-00-00 and 01-80-c2-00-00-30 <b>protocol-mac &lt;mac&gt;:</b> it is the mac address of protocol; <b>default-group-mac:</b> The default mac address is 01-00-0c-cd-00-02
<b>default</b>	-
<b>Mode</b>	Global mode.

<b>Usage Guide</b>	The command must be configured before bpdu-tunnel-protocol in port.
<b>Example</b>	<p>Configure 01-01-00-0c-00-03 to be the bpdu-tunnel-protocol of mrpp protocol.</p> <pre><b>Switch(Config)# bpdu-tunnel-protocol user-defined-protocol mrpp protocol-mac</b></pre> <p>00-03-0f-00-00-02 group-mac 01-01-00-0c-00-03</p>

## **bpdu-tunnel-protocol ethernetii**

<b>Command</b>	<pre><b>bpdu-tunnel-protocol user-defined-protocol &lt;name&gt; protocol- mac &lt;mac&gt;encaps-type ethernetii protocol-type &lt;type&gt; {group- mac &lt;mac&gt;    default-group-mac} no bpdu-tunnel-protocol user-defined-protocol &lt;name&gt;</b></pre>
<b>parameter</b>	<p><b>name:</b> it is the protocol name and the protocol name includes 1 to 32 characters, and it makes up with character, data and underline, the head and tail character cannot be underline;</p> <p><b>protocol-mac &lt;mac&gt;:</b> it is the mac address of protocol;</p> <p><b>type:</b> the value of protocol and the format is xx-xx</p> <p><b>group-mac &lt;mac&gt;:</b> it is the address of bpdu-tunnel-protocol mac and it must be multicast address, and it is not protocol saved address, namely the address between 01-80-c2-00-00-00 and 01-80-c2-00-00-30;</p> <p><b>default-group-mac:</b> The default mac address is 01-00-0c-cd-00-02.</p>
<b>default</b>	-
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	The command must be configured before bpdu-tunnel-protocol in port.
<b>Example</b>	<p>Configure 01-01-00-0c-00-04 to be the bpdu-tunnel-protocol of lldp protocol.</p> <pre><b>Switch(Config)# bpdu-tunnel-protocol user-defined-protocol lldp protocol-mac</b></pre> <p>01-80-c2-00-00-0e encaps-type ethernetii protocol-type 88-cc group-mac 01-01-00-0c-00-04</p>

## bpdu-tunnel-protocol snap

<b>Command</b>	<b>bpdu-tunnel-protocol user-defined-protocol &lt;name&gt; protocol-mac &lt;mac&gt; [encapsulate-type snap {oui&lt;oui&gt;}   } protocol-type &lt;type&gt; {group-mac &lt;mac&gt;   default-group-mac} no bpdu-tunnel-protocol user-defined-protocol &lt;name&gt;</b>
<b>parameter</b>	<p><b>name:</b> it is the protocol name and the protocol name includes 1 to 32characters, and it makes up with character, data and underline, the head and tail character cannot be underline</p> <p><b>protocol-mac &lt;mac&gt;:</b> it is the mac address of protocol</p> <p><b>oui:</b> the value of oui and the format is xx-xx-xx</p> <p><b>type:</b> the value of protocol and the format is xx-xx</p> <p><b>group-mac &lt;mac&gt;:</b> it is the address of bpdu-tunnel-protocol mac and it must be multicast address, and it is not protocol saved address, namely the address between 01-80-c2-00-00-00 and 01-80-c2-00-00-30</p> <p><b>default-group-mac:</b> The default mac address is 01-00-0c-cd-00-02</p>
<b>default</b>	-
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	The command must be configured before bpdu-tunnel-protocol in port.
<b>Example</b>	<p>Configure 01-01-00-0c-00-05 to be the bpdu-tunnel-protocol of Apple Talk protocol.</p> <p><b>Switch(Config)# bpdu-tunnel-protocol user-defined-protocol IIdp protocol-mac</b></p> <p>00-03-c2-00-00-05 encapsulate-type snap oui 08-00-07 protocol-type 80-9b group-mac 01-01-00-0c -00-05</p>

## bpdu-tunnel-protocol llc

<b>Command</b>	<b>bpdu-tunnel-protocol user-defined-protocol &lt;name&gt; protocol-mac &lt;mac&gt; [encaps-type llc dsap&lt;dsap&gt;ssap&lt;ssap&gt; {group-mac &lt;mac&gt;}   default-group-mac]</b> <b>no bpdu-tunnel-protocol user-defined-protocol &lt;name&gt;</b>
<b>parameter</b>	<b>name:</b> it is the protocol name and the protocol name includes 1 to 32 characters, and it makes up with character, data and underline, the head and tail character cannot be underlined. <b>protocol-mac &lt;mac&gt;:</b> it is the mac address of protocol <b>dsap:</b> The dsap value of protocol and it ranges from 0 to 255 <b>ssap:</b> The ssap value of protocol and it ranges from 0 to 255 <b>group-mac &lt;mac&gt;:</b> it is the address of bpdu-tunnel-protocol mac and it must be multicast address, and it is not protocol saved address, namely the address between 01-80-c2-00-00-00 and 01-80-c2-00-00-30. <b>default-group-mac:</b> The default mac address is 01-00-0c-cd-00-02
<b>default</b>	-
<b>Mode</b>	Global mode.
<b>Usage Guide</b>	The command must be configured before bpdu-tunnel-protocol in port.
<b>Example</b>	Configure 01-01-00-0c-00-06 to be the bpdu-tunnel-protocol of NetBIOS protocol.  <b>Switch(Config)# bpdu-tunnel-protocol user-defined-protocol llcp protocol-mac</b>  00-03-c2-00-00-06 encaps-type llc dsap 240 ssap 224 group-mac 01-01-00-0c -00-06

## 13. Commands for EEE Energy-saving

### **eeeenable**

<b>Command</b>	<b>eeeenable</b> <b>no eeeenable</b>
<b>parameter</b>	-
<b>default</b>	-
<b>Mode</b>	Port mode.
<b>Usage Guide</b>	It supports that configure EEE energy-saving function for the appointed port. There is not the EEE energy-saving function on port as default. After configuring the port to enable EEE energy-saving function, the port will enter the energy-saving state if stop to send packets to the port, the state of port is down. When sending packets to the port, the mode will changed from power saving mode to normal mode.
<b>Example</b>	Enable EEE energy-saving function: <b>Switch(config-if-ethernet1/0/1)#eee enable</b>

## 14. Commands for LED shut-off

### **port-led shutoff time-range**

<b>Command</b>	<b>port-led shutoff time-range &lt;time-range-name&gt;</b> <b>no port-led shutoff</b>
<b>parameter</b>	<b>time-range-name:</b> it is the name of the time-range defined by user, it is made up by 1 to 64 characters including letters, numbers, underlines. The first and last characters cannot be the underlines.
<b>default</b>	-
<b>Mode</b>	Global Configuration Mode
<b>Usage Guide</b>	The LED shut-off function of the port can make all the LEDs off according to the configured time-range by user no matter what the link-act status is. It can save power. When there is no configured time-range, the default is all the times; when the range is exceeded, the port LED can be on according to the link-act status.
<b>Example</b>	Configure all the LEDs to be off in t1. <b>switch(config)#port-led shutoff time-range t1</b>
