

## QN-DS-4825GF

### PRODUCT OVERVIEW

- Quantum Data Centre Switch Series provides Layer-3 connectivity with an integrated QNOS platform for data centre. It can be managed through Rudder controllers (Cloud hosted or on-prem), device GUI/CLI and SNMP.
- Besides being able to scale to massive deployments without any impact on latency, the platform has also been designed to provide seamless connectivity and provide a dense form factor with 48 SFP28 ports and 8 QSFP28 ports in order to provide seamless connectivity.
- Quantum data centre switches delivers outstanding throughput, resiliency and scalability for organizations with high performance network requirements.
- The switches support hot-swappable, redundant power supplies and fans; which are essential for fault tolerant environments like Data centre Top-of-Rack network deployments.
- High Precision Time stamping is one of the features supported by the platform, a cutting-edge technology that provides ultra-low latency with great cut-through.
